Ukraine hits at Union's heart

By John Lloyd in Moscow

MR Ivan Silayev, chairman of the Inter-republican Economic Committee and as such fulfilling the role of the Soviet prime minister, yesterday restated with crude force the Soviet case against a Ukrainian independence which now seems inevitable, following the 90 per cent vote in its favour over the weekend.

In an interview with the French daily Figaro, Mr Silayev warned of a "dramatic clash" of "tragic" or even "armed conflicts" if Ukraine did not join the new Union of Sovereign States to which seven of the formerly 15 Soviet republics have agreed to adhere.

Russia, he said, "did not agree" that the Crimean peninsula - given to the Ukraine in the mid-1950s by the then Soviet leader Mr Nikita Khrushchev - should remain in Ukraine's hands; Russia would re-open the question of all the borders between the two states; and it would immediately put trade between the two republics on the basis of world prices, forcing the energy-hungry republic to pay at least 10 times more in hard currency, for oil and gas.

In a further interview, with the former Communist party daily Pravda, Mr Silayev said that though he did not "equates" a declaration of sovereignty with "secession" from the Union, he was deeply concerned that a possible secession would "amount to violation of the nuclear non-proliferation treaty and increase the number of countries possessing nuclear weapons."

It is this which most concerns the west, too: all western countries will press the Ukraine to reduce to zero its nuclear arsenal - which it has said it wishes to do - though they now recognise that they cannot indefinitely withhold recognition until Ukraine does

For and against: Ukrainians debate the merits of independence in Kiev yesterday

everything they wish. In a stroke, the spectre of Ukrainian-Russian conflict is pressed; and though the Crimea voted by a reported 54 per cent for independence, the capital, Simferopol, was only 38 per cent in favour. Foreign observers in Moscow yesterday predicted that the Ukrainian Russians in Crimea and even in the Donbas region (where there was a heavy pro-independence vote) could constitute a disaffected minority.

One senior diplomat said: "In a hard winter, and if there is a struggle between Moscow and Kiev [the Ukrainian capital], the Russians will be drawn towards their fellow countrymen." He added: "Our impression is that the vote among the Russians was apathetic, and that they may be open to a swing in their views."

In fact, Russia has lost no

time in recognising Ukrainian independence. News of the recognition "in connection with the democratic expression of the will of" Ukraine was broken yesterday on Russian television. It remains to be seen whether Mr Boris Yeltsin, the Russian president, will now seek talks on the Crimea, or on the borders, or on a new basis for inter-republican trade.

Mr Mikhail Gorbachev, the Soviet president, has said that a Union without Ukraine would be a "disaster", or that it would be "unthinkable"; and he has threatened to resign if a union treaty, so far only initialled, is not signed. Yet the first indications are that he will have to think the unthinkable, or resign. Mr Leonid Kravchuk, the former senior Communist official now triumphantly elected Ukrainian president in the first round with

some 60 per cent of the vote, stressed in his post-election announcements that he saw his country as wholly independent, and certainly not about to accede to any centrally organised union.

Mr Kravchuk told Reuters he was flying to the Belorussian capital of Minsk on Friday to discuss the formation of an economic union between the two states - possibly with Russia, the third and largest of the three Slav republics, as well. "Its headquarters would certainly not be in Moscow - perhaps in Minsk or Kiev," he said.

The shock of the loss of Ukraine still appears too great for many Russian officials to absorb. Yet the result appears decisive, the die cast. The very heart of the Soviet Union looks as if it is broken. Editorial comment, Page 20

Kravchuk is transformed into father of his nation

EUPHORIC radio announcers in Kiev woke listeners yesterday morning with the tidings: "You are now citizens of an independent Ukraine. Happy birthday, free Ukraine."

It was a particularly significant day for Mr Leonid Kravchuk who was elected the republic's president on December 1 and who must take much of the credit for the Ukrainian people's overwhelming endorsement of independence.

Just two years ago, Mr Kravchuk earned his keep as communist ideologue by lambasting "bourgeois nationalism". As a direct result of the referendum on independence, the peasant's son from the traditionally nationalist western Ukraine will now be acknowledged as the father of the Ukrainian nation which, until yesterday, had only enjoyed two brief episodes of independence in the past millennium.

"People get the presidents they deserve," said former dissident Mr Mykhailo Horyn. Although he is deputy head of Rukh, the pro-independence movement which Mr Kravchuk once tried to ban, and campaigned hard for a different candidate, Mr Horyn made his observation with a broad smile.

As a rule, the Ukrainian people are not radical, they are more centrist. To most people, Kravchuk appeared as a centrist. Mr Horyn noted. Then, barely containing his glee, he gave the reason why the Ukraine's former political prisoners are so willing to co-operate with their jailers.

"Although Kravchuk won, the programme of Rukh won, too, because our first tenet has always been independence."

Many democrats feel an ex-communist president is the price of an independent Ukraine and that paradoxically

Mr Kravchuk is an apt symbol of their newly-independent nation. Indeed, the republic's astonishing support for independence in many ways mirrors Mr Kravchuk's personal transformation.

A sweeping 91 per cent of the inhabitants of the Russified, eastern Ukrainian cities of Kharkiv and Zaporizhia endorsed independence, a result which shocked even the most optimistic nationalist.

Chrystia Freeland profiles the ex-communist who has been elected president of the Ukraine

Mr Hennadii Turchynsky, a 47-year-old technician in the Russified city of Donetsk, described the impulse behind this result. "This is a lost city, a lost region, we have no identity, no church, no language. I hope that in an independent Ukraine we will become true human beings."

Mr Kravchuk insists that he has only cardinally changed his world view once and explains his intellectual odyssey as a shift from Hegel, Marx and Feuerbach to Mykhailo Hrushevsky, the Ukrainian historian who was briefly president of his nation in 1917.

There has been speculation that Mr Kravchuk, who is a skilful strategist, might soften his nationalist line after securing the presidency.

The contrary seems to be the case. At a meeting with international observers, Mr Kravchuk spoke as the self-assured leader of a powerful, self-confident nation which no one could afford to ignore.

"A great historical event has

occurred which I am certain will not only change the life of the Ukrainian people but will change the face of the world," he said.

Mr Kravchuk's Ukraine, which will stand as the largest European state between Germany and Russia and will tower over its smaller east European neighbours, is likely to seek a place in Europe and reject the old Soviet Union.

But Mr Kravchuk said that the Ukraine would also seek close ties with the former republics of the USSR.

"Since 1922, we have had the experience of such tight co-operation that it was impossible to wiggle a single finger independently," Mr Kravchuk said. He insisted that future relations with Russia could only develop on an equal basis "without older or younger brothers".

This could be tricky because an increasingly troubled Russia is unlikely to surrender its historic dominance over the rich Ukraine easily. Mr Kravchuk has suggested the creation of a nuclear weapons co-ordinating committee made up of the Ukraine, Russia, Belorussia and Kazakhstan, the four republics with nuclear weapons, and a Chernobyl clean-up alliance consisting of the Ukraine, Russia and Belorussia.

Independent Ukraine seems poised to pursue aggressively a new, western orientation. It is developing strong ties with its four eastern neighbours, including Poland, which yesterday recognised Ukrainian independence.

But yesterday, Ukrainians set aside its worries.

"All my life I have been ashamed of my people," Mr Horyn said. "Even in the labour camps I always apologised for the Ukraine's cowardice. But today, at last, I am proud to be Ukrainian."

French railways plan 4,800 job losses

By William Dawkins in Paris

THE SNCF, the French rail board, is planning to lose 4,800 jobs next year because of declining European rail traffic and the computerisation of many white-collar posts.

The plans, which management has just placed before SNCF works councils, will add to the French government's growing worries about job losses in the private sector. A rising unemployment rate - 9.7 per cent in October - is the government's main headache over an otherwise resilient economy.

All SNCF's job losses will take place through retirement. About 7,800 French rail staff are due to retire next year, when the management plans to take on only 3,000 new employees, bringing the total to 184,000. The SNCF will have lost 2,800 jobs in the whole of 1991.

The next round of losses will be administrative and manual tasks capable of being automated. After consultation with works councils, the job losses will need the agreement of the government at an SNCF board meeting at the end of this month.

The group expects barely to break even this year, after a FF117m (£12m) profit in 1990.

Long-distance traffic, mainly business travel, is set to fall from last year's 48bn passenger/kilometres to just over 46bn passenger/kilometres.

This year long-distance traffic is SNCF's only profitable activity, apart from its small parcels service, said a spokesman.

German steel workers remain defiant over Italian bid

By Leslie Collitt in Berlin

IMPROVED bids by German and Italian companies for the eastern German steelworks outside Berlin have failed to quell a strike by 5,000 employees of the Hennigsdorf Steelworks which went into its second week yesterday over the planned sale of the plant.

The board of the Treuhand privatisation agency recently recommended that the steel mill, along with the Brandenburg Steelworks, be sold to Riva, an expanding Italian steel group. But the steelworkers at Hennigsdorf protested by occupying their plant. They and the Brandenburgers favour a rival bid by a German consortium of Thyssen, Badische Steelworks and Saar Steel. A decision on the sale is to be

made at a meeting on December 17 of the Treuhand's managing board.

The Treuhand believes that although the rival bids are not far apart it is important to demonstrate that foreign companies have an equal chance to invest in companies in eastern Germany.

Supported by the German consortium, the workers at Hennigsdorf said the Italian group would lay off more workers. Figures leaked to the works council at Hennigsdorf purported to show that Riva planned to keep 700 out of the 5,000 employees while the German companies would retain more than 1,000 workers.

Subsequent figures showing that Riva would keep 1,200 peo-

ple failed to lessen the opposition. However, Mr Peter Schulz, head of the works council at Hennigsdorf, said he favoured the group which guaranteed the most jobs.

The Hennigsdorf and Brandenburg steel mills are of such interest because of the wire rod and reinforcing steel they produce on relatively efficient equipment. Riva wants to nearly triple annual production at the steel mills from the current 300,000 tons. But this would cut into sales of the German steel producers who are opposed to such an expansion of capacity in the east.

The sprawling property site of the Hennigsdorf plant on the outskirts of Berlin is also regarded as a prime asset.

Polish invitation to manage funds

By Emma Tucker

INVITATIONS to international banks and fund management firms to bid for the running of Poland's new national investment funds will be sent out this week, Mr Jerzy Thieme, director of the country's privatisation project, said yesterday.

About 200 medium to large state-owned enterprises mainly in manufacturing and construction will be converted to companies and the majority shareholdings transferred to the 20 or so planned investment groups.

The closed-end funds will have Polish chairmen and some board members, but the day-to-day management will be carried out by western banks and fund management firms.

Mr Thieme said the ministry of privatisation had selected

companies which were generally "in much better shape than the average Polish company" for the first tranche - 10 per cent of the overall privatisation programme.

The forecast turnover for the companies this year, based on half-yearly results, is \$5.5bn with profits of \$700m, according to Mr Thieme, who added that an opinion poll was being conducted to establish how people would like to see stakes in the investment funds distributed.

Mr Jan Ledochowski of SG Warburg, the merchant bank which has been assisting the privatisation, said that the forecasts had been drawn up soon after Poland had devalued, when trade with Moscow had stopped, and the

recession was at its worst. "What we are saying is these profits were earned probably during the worst possible time in recent months," said Mr Ledochowski.

Earlier this year the ministry announced that every Polish adult would receive a participation certificate in each fund for a nominal charge. However, Mr Thieme said since the ministry did not know what changes everybody could afford it had decided to conduct an opinion poll. One suggestion is that people paid by the budget (such as teachers, doctors and nurses) should receive favourable treatment.

Mr Thieme said the ministry hoped to have the results of the poll by the middle of January.

King Hassan gives assurance to Italy on investments in Morocco

By Robert Graham in Rome

KING HASSAN of Morocco has assured the Italian government a two-year-old agreement to guarantee Italian investments in his country will be ratified in early 1992.

The two countries have also signed an economic co-operation agreement designed to boost industrial relations. This is the main upshot of a visit here last week by King Hassan, the first Moroccan monarch has made.

The visit appeared to be part of an attempt by King Hassan to persuade the Italian government to focus on investment and trade opportunities in Morocco. He also wants to reassert his international profile at a time when his country has come in for serious criticism for abuse of human rights and is awaiting the outcome of the forthcoming referendum on the future of the former Spanish Sahara.

Italy is currently Morocco's third-largest trading partner after France and Spain. Last

King Hassan: seeks to raise international profile

year Italy exported \$572,000m (\$478m) worth of goods, equivalent to 6.3 per cent of total Moroccan imports, while Italy

purchased \$426,000m from Morocco, mainly foodstuffs (fresh and frozen fish) and phosphates.

Italian exports have been backed by a three-year, 1989-91, agreement with aid worth \$80,000m and project credits to a ceiling of \$140m.

Ratification of a convention guaranteeing Italian investments has been held up since 1990, allegedly because of bureaucratic problems.

However, Italy has given relatively little attention to Morocco among the Magreb countries, focusing instead upon Algeria. Relations with the latter are considered of major strategic importance given its role as a supplier of natural gas.

In December 1990 Italy agreed to provide a total of \$7.2bn in credit lines. Of this \$2.4bn was earmarked to repay existing loans falling due in January 1993, and another \$4.3bn to cover the purchase of goods and services in Italy.

Let's talk about ECU

The European Currency Unit has already become an important factor in the financial markets. And sooner than you think, it may become as important as the dollar, the DM and the yen already are.

That means there's no better time than now to establish an ECU account and clearing relationship. One that can serve you as well ten years from now as it can today.

Deutsche Bank is one of the few financial institutions approved as an ECU clearing bank. We already

handle a substantial volume - and we're prepared to handle much more. Cleanly. Efficiently. And, of course, electronically.

If you would like to deal with a global leader in ECU clearing - let's talk.

Washington gives visas to PLO officials

By Tony Walker in Cairo

THE US issued visas to two Palestine Liberation Organisation officials yesterday in an effort to clear the way for the arrival in Washington of a Palestinian delegation for Middle East peace talks due to begin tomorrow.

In Amman, Mrs Hanan Ashrawi, spokeswoman for the Palestinian team, said that Palestinian delegates would be travelling to Washington overnight to "prepare for bilateral talks due to begin on December 4".

Delegates in a Jordanian-Palestinian team had said earlier that they would not travel from Amman to Washington unless similar courtesies were extended to PLO officials as had applied last month in Madrid, where the latest US-inspired peace effort was launched.

Mr Nabil Shaath, a senior adviser to Mr Yasser Arafat, PLO chairman, said in Cairo that seven PLO officials had sought visas, including himself.

The two who had been granted US visas were Mr Akram Haniyeh, a journalist, and Mr Tayyar Anouzi, the Palestinian Communist Party.

Mr Shaath, who led the PLO "advisory" team in Madrid said that it appeared "almost as if the US was engineering a crisis

to shift the blame from Israel to the Palestinians". US attempts to convene a new round of face-to-face talks between Israel and its Arab neighbours, including a Jordanian-Palestinian team, are in trouble in any case, since Israel had sought a delay until December 5, five days after the US-nominated date.

Israel's cabinet on Sunday reaffirmed an earlier decision to delay participation in the Washington round until next Monday, although room was left open for compromise.

In Washington, a State Department spokesman said the US dealt with visa applications on a case-by-case basis and would grant them only for humanitarian reasons.

The PLO, excluded by an Israeli veto from direct participation in the peace process, is seen by Palestinians as their sole legitimate representative.

The US nominated Washington for the second round of talks after Israel and its Arab neighbours failed to agree on a venue. The first bilateral discussions - the cornerstone of the latest US peace initiative - were held in Madrid early in November.

Israel, which has grown increasingly critical of what it regards as America's less than even-handed mediating role, wants the talks moved back to the Middle East region, possibly to Cyprus.

Israel sending confusing signals

By Hugh Carnegie in Jerusalem

ISRAEL will not be present to resume Middle East peace talks in Washington tomorrow and there were even doubts over its own proposed date of next Monday, Mr Yossi Ben Aharon, the director general of the prime minister's office, said in Jerusalem last night.

"Wednesday is out of the question now," said Mr Ben Aharon, an adviser to Prime Minister Yitzhak Shamir.

Syria, Lebanon, Jordan and the Palestinians have all accepted the US invitation to engage in bilateral negotiations with Israel on December 4, continuing the process begun in Madrid in October.

But Mr Ben Aharon told the Financial Times the only Israeli presence in the US capital would be a "technical presence" to prepare for later talks.

Adding to the confusion that has surrounded Israel's stance since it refused the American invitation, he stressed that Israel wanted a response before resuming negotiations to its proposal that the talks with the different Arab parties be staggered on different days, to avoid the appearance of coordinated negotiations.

It also wants to move back to the Middle East after only two sessions in Washington. Other officials said Mr Shamir remained committed to starting talks on December 9.

EC backs Lockerbie case demand

By David Gardner in Brussels and Mark Nicholson in London

THE European Community yesterday endorsed British, French and US demands that Libya surrender for trial two nationals alleged to be behind the Lockerbie bombing.

The EC-US alliance against Libyan-sponsored terrorism is intended to signal to Tripoli that it can expect a united European response if it fails to comply with the legal process against its alleged agents.

UK officials called the endorsement "extremely satisfactory" and came as Mr Douglas Hogg, Foreign Office minister, began a tour of Algeria, Tunisia, Egypt and Malta to seek support for the demand that Libya hand over the two men.

Mr Hogg yesterday held talks with Mr Chadli Benjedid, the Algerian president, saying afterwards: "We are in full agreement on the need to try to find a peaceful solution."

Mr Hogg then left for Tunisia, where he will also ask the government to petition Libya for the handover of the two men.

The EC calls on Libya to "comply promptly and in full" with demands to surrender for

trial those charged with placing the bomb on the Pan Am airliner three years ago, accept responsibility for the actions of Libyan officials in the bombing; disclose all it knows of the case; allow full access to all witnesses, documents and material evidence including bomb timers; and pay appropriate compensation to families of the victims.

When the US bombed Tripoli in April 1986 it had support from the UK, but the EC as a whole was profoundly split over what many regarded the

flouting of international law. Mr Douglas Hogg, the UK foreign secretary, told his colleagues that handing over the two suspects would not be enough by itself. "In view of a clear pattern of support by Libya for terrorism over many years," Mr Hogg said, "we must insist that they cease this support and show that they have done so."

The UK said that there was "no formal deadline", but has yet to receive any formal reply from Libya to its request that the men be surrendered.

Moi U-turn upstages opposition

Julian O'Zanne and Michael Holman report on surprises from Nairobi

PRESIDENT Daniel arap Moi's unexpected U-turn yesterday, with his decision to open the gates to multi-party politics, has taken the Kenyan opposition by surprise.

By moving swiftly to fall into line with the democratic sentiments which have swept across the continent in the last 18 months, Mr Moi has also acted boldly to restore Kenya's tarnished reputation among international donors, who have provided \$1.6bn of assistance in the last two years.

Some observers said yesterday that Mr Moi, in the face of unprecedented international and domestic pressure for political pluralism and economic reform had merely bowed to the inevitable.

However, few Kenyans expected the president, who has been Africa's staunchest defender of the one-party state, to go as far as he did. By announcing the dawn of multi-party politics Mr Moi has shown that he still controls the political initiative.

His swift conversion over the last few weeks to acceptance of political pluralism has demonstrated that he is capable of reacting to events with remarkable speed in an attempt to steal a march on the nascent opposition.

Although political opinion polls do not exist in Kenya, many observers say Mr Moi retains some popularity in the rural areas and among the minority tribes which were discriminated against under the regime of former president

Moi: acted boldly

Jomo Kenyatta. Mr Moi's likely next step will be to call a multi-party general election early next year in the hope that the powerful ruling Kikuyu party machine can steamroller an opposition which, while articulate, is badly organised, divided and offers no fundamental policy alternative to the economic reform programme already embarked upon.

Mr Moi can point to relatively sound economic policies of positive per capita economic growth and a sensible management of Kenya's exchange rate and external debt obligations during the 13 years of his presidency.

Although that record has been dented in recent years by widespread corruption, backsliding on economic policy pledges made to international donors, and mismanagement, particularly in the state-owned

sector, Kenya remains one of the handful of African countries which can boast of political stability and economic growth.

Mr Moi's future however may depend more on whether the opposition can mount a united and credible challenge.

Apart from its organisational weaknesses, the opposition's task is a formidable one. It has to overcome ethnic, regional, personality and age differences which have so far been largely concealed under the umbrella of a broad demand for political change.

Chief among these differences is the ethnic composition of Kenya, as powerful a political factor today as it was nearly 30 years ago at independence.

Then, as now, any aspiring president and party can only win office through an ethnic coalition which takes account of the main four tribal groupings - the Kikuyu, the biggest single tribe, the Luo, the Luhya and the Kamba.

The opposition will also have to address the question of how to appeal to the "minority factor", the remaining balance of Kenya's tribes, many of which feel afraid of a Kikuyu-dominated government, and whose allegiance could conceivably tip the scales in a closely-contested poll.

The main opposition group that has emerged so far, the Forum for the Restoration of Democracy (Ford) has a leadership carefully chosen to reflect the tribal and political spectrum. Already, however, there

are indications that some of the Kikuyu political heavyweights like Mr Paul Muthika, chairman of the Law Society of Kenya, and Mr Githu Imanyara, a leading government critic, are unhappy about entering a coalition with the two leading lights of Ford - Mr Martin Shikuku and Mr Masinde Muliro, both veterans from the independence struggle and both members of the Luhya tribe.

In an interview last night, Mr Muthika and Mr Imanyara confirmed they would launch a new political party on Thursday called the National Democratic Alliance which, while comprising leaders from several ethnic groups, is most likely to be dominated by the Kikuyus and their close tribal relatives, the Meru and Embu - which together make up 25 to 30 per cent of the population.

Both Mr Muthika and Mr Imanyara, who are appealing to the younger generation, also said last night the pro-democracy opposition would boycott elections unless the government moved quickly to allow political parties to register, set up an independent electoral commission, agree a timetable for the election with the opposition and call in international monitors.

The split of the opposition into competing political parties could yet allow Mr Moi to gather enough support from voters driven more from fear of the alternative to put the president and Kikuyu back into power.

Row looms over HK supreme court

By Angus Foster in Hong Kong

HONG KONG and Britain are trying to avert another damaging political row with China over the colony's proposed court of final appeal.

The two sides agreed on the structure of the court in September but Hong Kong political leaders, against the wishes of the Hong Kong government, have attacked the agreement as compromising judicial independence. China has hit back by claiming Britain is involved in a conspiracy with Hong Kong politicians to renegotiate a better deal.

China is expected to lodge strong complaints to Britain through the Sino-British Joint Liaison Group. This body, which is overseeing the details of Hong Kong's 1997 return to Chinese sovereignty, had hoped for progress on a range of issues following Mr John Major's China visit in September.

But there are now fears that relations have deteriorated again. The last row between the two sides, which raged over Hong Kong's planned new airport, stalled progress on several issues, including the court.

"We have not had a very long honeymoon," said a senior Hong Kong government official.

The Joint Liaison Group's session is especially embarrassing because Hong Kong's legislative council, or parliament, is expected to pass a motion tomorrow urging Hong Kong to renegotiate the court's structure. Britain said Hong Kong have insisted they will not renegotiate. But the court cannot be set up without the council's approval, which will be sought next year at the earliest.

The key point of contention is over the number of overseas judges allowed to sit on the court, which will replace the Privy Council in London as Hong Kong's final appeal court. Britain and Hong Kong wanted two of the court's five judges to come from overseas, but backed down to one judge to get agreement on the court's early establishment.

Mr Michael Sze, Hong Kong secretary for constitutional affairs, is expected to tell legislative councillors tomorrow that renegotiating for more foreign judges would endanger the court's existence after 1997 and set a precedent for China also to renegotiate deals.

China has warned that the court will be restructured after 1997 if it is not to its liking.

Mr Sze and other government leaders have been trying to rally support in the council but so far appear unsuccessful. However, some councillors may temper their calls to renegotiate given the strength of Chinese complaints.

Boat people arrivals at six-year low

The number of Vietnamese arriving in Hong Kong fell to its lowest monthly level in six years in November, Angus Foster writes.

Hong Kong has attributed the decline to the agreement in October between the UK and Vietnam on the forced return of all boat people who do not qualify as genuine refugees.

Only seven boat people arrived last month, compared with 300 in the same month last year. The number of boat people volunteering to return has also increased to record levels.

more than 60,000 boat people remain camped in the colony.

South Asian summit planned

Leaders of the seven South Asian Association for Regional Co-operation states (SARCs) will resume their annual conference in Colombo before Christmas, Mervyn de Silva reports.

The one-day summit will enable the leaders to pick up from an three-day conference early last month aborted when the king of Bhutan, pleading security problems at home, did not turn up.

Few doubts about Assad election

Cheering crowds of Syrians went to the polls yesterday for a yes-or-no ballot to give President Hafez al-Assad another seven years in power, Reuters reports from Damascus.

After days of noisy demonstrations in favour of re-election, long queues formed outside polling places in Damascus in spite of rain and cold weather.

Assad, now 61, seized power in 1970. Results of the ballot will be announced today but there is no doubt about the outcome. It will be his fourth term as head of state.

The president was nominated by parliament on November 17 as the sole candidate.

Soviet immigration falls sharply

SOVIET Jewish immigration to Israel slumped in November to its lowest level, apart from a sharp fall during the Gulf war, since the influx got under way in early 1990. Officials said rising unemployment was deterring would-be immigrants despite worsening economic conditions in the Soviet Union, writes Hugh Carnegie.

Ironically, the slower rate around the level many economists believe would give a spur to growth without putting excessive strain on the economy. But it is counted as a

failure by the government because of the Zionist commitment to take in as many of the world's Jews as possible - especially those reckoned to be in distress.

The authorities said 8,090 Soviet Jews immigrated in November, down from almost 9,850 in October and the lowest monthly total this year apart from February, when the Gulf war cut the number to 7,160.

Jewish settlers said yesterday that they would start another town in the occupied West Bank to avenge the

shooting of an Israeli and threatened to send armed patrols into Palestinian areas. Reuters reports from Jerusalem: "Wherever Jewish blood is spilled, a settlement has to rise," Mr Zvi Katzover, mayor of the Kibbutz Arava settlement, said. "We will put a settlement there no matter what."

Some 110,000 Jewish settlers, living in fortified colonies among nearly 2m Palestinians in the West Bank and Gaza Strip, fear the US will force Prime Minister Yitzhak Shamir to give up land.

Bordeaux Technopolis: the meeting place for European High Tech

Bordeaux Technopolis' fields of specialty are space and aeronautics (with over 11,000 employees), products and electronics (including all the great names in this sector), biotechnology and health (6,000 employees), and new materials (over 400 research scientists).

The Bordeaux and Gironde department's multi-centered technopolis also takes advantage of the huge potential offered by some 300 major research laboratories, 5,000 scientists, 60,000 students at three universities, 15 institutions of higher learning, four national

engineering schools, and twenty technical and scientific associations.

High Tech firms and laboratories cooperate there in the areas of science, technology, and industry on a European and international level. In order to promote and encourage such cooperation, Bordeaux Technopolis created the Technological Cooperation Award.

This award will be launched in Birmingham and Manchester on December 9th and 10th. For further information, please call Philippe LE MOINE: Tel. 061 236 7949.

Making a point: the Dalai Lama faces the press after meeting John Major at Downing Street yesterday

Spiritual tone as Major meets Dalai Lama

By Alexander Nicoll, Asia Editor

MR John Major yesterday became the first British prime minister to meet the Dalai Lama, exiled god-king of Tibet.

The Dalai gave a diplomatic account of the encounter. The two had a "very pleasant meeting" discussing human rights and - in the presence of the Archbishop of Canterbury - "the value of spirituality in modern times".

He described in a measured manner his plans to bring democracy, a mixed economy

and secularism to Tibet, which has been governed by China since being invaded in 1950.

Asked, however, by a Chinese reporter why he did not return to work with the Chinese authorities, the Dalai launched into an impassioned account of his dealings with China: his relationship of trust with some leaders including Chairman Mao, a string of broken promises and unfulfilled agreements while repression inside Tibet grew. The Dalai

wants to visit Tibet in the company of senior Chinese leaders and outside observers. But China's proposal in response had made it useless to discuss this.

"If I returned I would get a lavish house, lavish food and a lavish big seal on my mouth," he said. In discussions with the Chinese, "the ear organ is missing. For mutual respect, it is very important to listen."

Mr Major met the Dalai "in his spiritual capacity as a man of peace". However, the prime

minister also emphasised the importance of maintaining a dialogue with China because it was "too big and too important to be isolated".

Mr Major told the Dalai he had raised human rights, including those of Tibetans, in his meeting with Li Peng, the Chinese premier, in September. Britain has never recognised Chinese sovereignty in Tibet, but acknowledges China's "special position" there.

Banned politicians in Nigeria answer charges

By Emili Tagaza in Canberra

WEAK trade results in October have punctured Australia's expectations of slow economic recovery. Figures released yesterday by the government show a current account deficit in October of almost \$1.3bn (\$333m) in seasonally adjusted terms, up 7 per cent from the September figure.

While the deficit is the biggest monthly shortfall this financial year, it is within the government's budget forecast. Nevertheless, there is concern that the recession in the US and the slowdown in Japan's

Rebengida's administration in 1987 from participating in the transition to civilian rule.

The charges were the latest in a series of military moves which have worried political leaders following allegations of corruption in party primaries to choose candidates for state governorships for elections on December 14.

The radio gave only sketchy details of the tribunal's hearings, but said the 11 included Mr Abubakar Kiani, former governor of the northern state of Kano and Mr Lateef Jakande, the former governor of Lagos.

Australian recovery hopes hit by poor trade results

By Emili Tagaza in Canberra

WEAK trade results in October have punctured Australia's expectations of slow economic recovery. Figures released yesterday by the government show a current account deficit in October of almost \$1.3bn (\$333m) in seasonally adjusted terms, up 7 per cent from the September figure.

While the deficit is the biggest monthly shortfall this financial year, it is within the government's budget forecast. Nevertheless, there is concern that the recession in the US and the slowdown in Japan's

economy might continue to depress the country's exports.

Seasonally adjusted, October exports fell 7 per cent to the lowest level in six months. Imports were down 3 per cent, leaving a merchandise trade surplus of \$130m, down from the September surplus \$380m.

Also disappointing to a government hoping for a housing-led recovery were figures showing home building approvals in October fell 2.4 per cent, seasonally adjusted. The building industry, however, sees the decline as a levelling trend.

WHAT DO YOU CALL AN INTERNATIONAL OIL COLOSSUS THAT'S ALSO FRANCE'S BIGGEST INDUSTRIAL GIANT?

■
ELF.

We admit the name 'Elf' hardly suggests a mighty company with a turnover of US \$35 billion.

A huge operation that is France's most profitable company, with a net income of over US \$2 billion in 1990.

A far sighted Leviathan that has invested over US \$15 billion in the last 3 years.

Nor does the regional word 'Aquitaine' hint at a massive organisation that employs 90,000 people and straddles five continents.

But there again, 'Little John' was an odd name for a giant too.

And though the name 'Elf' might sound a trifle insubstantial, that's not the word you would use to describe our growth.

Turnover has increased more than 40% since 1987, profit has doubled in four years and we now have the greatest Capital Value on the Bourse.

All this has made us the largest oil and gas group in France, the third largest in Europe and the 7th largest in the world.

We've also made successful developments in the chemical and pharmaceutical industries.

So we like to think we are both large, and perfectly formed.

If you want to take a closer look at us, we'd be happy to send you a copy of our 1990 Report and Accounts.

Just ring Paris (1) 47 44 24 63.

We think you'll be hugely impressed.

Major's plea prompts new farm trade talks

By David Dodwell, World Trade Editor

FARM trade negotiations between the US and the European Commission resume in Brussels and The Hague this week, following a direct plea last week from Mr John Major, UK prime minister and present chairman of the Group of Seven industrial nations.

Mr Major wrote to other G7 leaders asking them to "use their personal influence to close the remaining gaps" in logjammed farm talks, which have been blocking a successful end to the Uruguay round of world trade talks. The meeting has attracted controversy

because it is to exclude farm ministers, seen as too vulnerable to pressure from their local farm lobbies to make the broad concessions needed to achieve a breakthrough in farm trade negotiations.

Mr Peter Lilley, UK trade and industry secretary, said in London yesterday that next week's Maastricht summit would be used to tackle the Uruguay round impasse if insufficient progress is made this week. The Maastricht agenda is already heavy, and EC leaders remain anxious not to "pollute" the summit with

acrimony over farm trade.

Mr Major is expected to discuss the trade talks when he meets President François Mitterrand in London this week. France is the most strident of EC member states over limiting Uruguay round concessions on farm trade. Mr Lilley set the stage for those talks yesterday when he warned at the Institute of Directors in London that if a trade talks breakthrough is not achieved before the end of the year, the Uruguay round "will be dead". "It is over and out by the year end," he added.

"Agreement is possible. It is urgent. It is vital," Mr Lilley said. "It would be unthinkable for the Community to hold up agreement to spread the benefits of freer world trade in which it so deeply believes."

He called for three immediate initiatives: the conversion of political progress into detailed texts; a final intensive round of bilateral talks between the US and the EC, but away from the media spotlight that played a part in frustrating success a year ago; negotiating teams should reveal their bottom-line positions, if not to other negotiating parties, then at least to Mr Arthur Dunkel, GATT director-general, who can then prepare a final agreement which "must be for acceptance, not for further negotiation".

He claimed farmers' fears for loss of farm trade protection were exaggerated; most subsidy payments were absorbed by storage, refrigeration and storage costs. At the same time, subsidies drove up farmers' rent and land costs. "All too little of the subsidy seems to end up in the farmer's pocket."

Lilley: It's over and out by end of the year

Uruguay Round negotiators wait for signals on a deal from Brussels

NEGOTIATORS from some 100 countries in the Uruguay Round trade talks in Geneva are hoping this week for a signal from Brussels, where the EC and US are to try again to find a way out of the impasse over agriculture, William Dalforce reports from Geneva.

Mr Julius Katz, US deputy trade representative, will join Mr Robert Zoellick, State Department under-secretary for economic affairs, for a meeting with senior EC officials, probably Mr Hugo Paemen, EC chief trade negotiator, and Mr Pascal Lamy, chief aide to EC Commission President Jacques Delors.

Waiting in Geneva, as Mr Arthur Dunkel, GATT director-general, said on Friday, are the texts or outlines

of accords amassed over five years' negotiations that would liberalise trade, reinforce the multilateral trading system, and boost the world economy.

Mr Dunkel proposed that negotiators pause for reflection during GATT's annual meeting on Tuesday and Wednesday and returned for a final intensive two-week exchange, when they would settle remaining core issues, leaving details to be worked out in the new year.

Without a green light from the Brussels meeting, that exchange will not occur. The EC and US have first to open their way for resuming bilateral talks on farm subsidies, renewing hope for a multilateral farm deal in the Round. Without a

farm deal, the trade talks will not be completed in the next few weeks, at best being postponed until 1993.

This week's meeting in Brussels represents an exercise of the political will that Mr Dunkel, industrialists and business groups have been urging as essential to complete the Round. It is the result of an phone exchange last week between President Bush and Mr Rud Lubbers, Dutch prime minister and EC president.

In their first display of political will at the EC-US summit in The Hague on November 9, the two presidents and Mr Delors pledged to close the gap between the two big trading powers over farm reform. Their farm negotiators failed to

do so, leading some EC governments and trade officials to believe such a crucial negotiation could not be left to agricultural experts.

The negotiators were bound by instructions from EC farm ministers that did not reflect the will of the presidents, a trade official said. But trade diplomats remain sceptical about how political will can be exerted through this week's meeting in Brussels.

The inclusion as troubleshooters of Mr Zoellick and Mr Lamy, the US and EC "shepherds" at the last summit meeting of leaders of the seven industrialised countries, is controversial. "The best they can do is compare notes and see what might be done," one diplomat said.

US officials say a solution to the deadlock is impossible, unless the EC shows greater flexibility in cutting farm subsidies. At this stage, only EC heads of state could probably authorise such flexibility. They are split on the issue and their attention is focused on the next Monday's summit on EC political and monetary union at Maastricht.

The UK wants the Uruguay Round on the agenda at Maastricht. French officials say President François Mitterrand does not want the EC summit "polluted" by the Round. France, facing severe political problems, last week announced extra payments of FF22bn (£200m) to its farmers, and is in no position to put before them trade agreement

enjoining deep subsidy cuts. Mr Louis Mermaz, farm minister, said on Sunday he saw no possibility for a farm accord with the US.

It is evident the officials meeting in Brussels have a tough task. The best they could do would be to find a formula letting the EC and US farm negotiators resume talks. But, if US officials are to be believed, this would need some indication the EC is ready to offer more.

Both sides have agreed to cut subsidies in three areas: exports, domestic supports, and border protection. At the Hague summit, President Bush lowered US ambitions by agreeing to negotiate 30-35 per cent farm subsidy cuts over five years.

Some EC governments believe the Community has gone far enough by accepting the demand from the US and the Cairns Group of farm-exporting nations led by Australia, for farm products into tariffs to be progressively reduced.

But the US so far considers the EC offer inadequate. Washington wants to be sure any deal will lead to real, quantifiable cuts in subsidised exports of cereals, meat and other food products on world markets. Anything less could not be "sold" to a US Congress where trade protectionist sentiment is strengthening, US officials say.

The Uruguay Round is still hanging on the edge of a cliff.

Japan trade surplus expected to begin growing next year

By David Dodwell, World Trade Editor

JAPAN'S trade and current account surpluses are likely to begin growing again from next year, fuelling a surge in direct investment in the Pacific region, according to the London Chamber of Commerce in its latest International Economic Outlook. This could lift the region's share in world trade by more than one fifth, from the present 23 to 28 per cent by the year 2000.

Mr Geoffrey Dicks and Mr Shigeru Kaneko, in an assessment of shifting patterns in world trade, see Japan's current account surplus surging from \$35bn (\$35.5bn) this year to over \$100bn. "Two years of tight money aimed at reducing asset and consumer price inflation have slowed domestic demand, to the extent that Japanese industry is again aggressively searching out overseas customers," they say.

The trade surplus is unlikely to grow with the US, which is "making only tentative steps out of recession". Instead, exports are expected to surge into Germany and the booming economies of the Pacific.

As Japan's direct foreign investment has risen from a bare \$5bn in 1980 to almost \$70bn last year, the US and Europe have been the principal targets, with many "transplants" set up to supply local markets directly. But the 1990s will see a rising proportion flowing into Asia, with the focus shifting from the newly industrialising economies of Taiwan and South Korea, to mainland China, Vietnam, and Asian countries such as Indonesia and Thailand.

The Outlook sees a significant shift in the American pattern of trade, with US moving back into trade surplus with the EC after slumping into deficit in the mid-1980s, and reining in its bilateral deficit with Japan. Deficits with the rest of Asia are set to grow, with China "now the most rapidly rising component of the overall US trade deficit".

From a \$35m surplus in its trade with China in 1980, the US slipped into a \$100m deficit last year, the third-biggest country shortfall after Japan (\$41bn) and Taiwan (\$11bn). "This development appears to have survived the events of Tiananmen Square" in June 1989, the assessment notes.

Overall, the Outlook sees the US current account deficit falling from \$92bn last year to \$64bn by 1995. The EC, which is different from Japan or the US in that a large proportion of its exports and imports goes to or comes from other countries within the Community, has also seen a changing pattern of trade.

While the overall trade deficit remains today similar to that in 1980 (around \$60bn), the deficit with the US has shrunk, while that with the Middle East has turned into a small surplus. But the bilateral deficit with Japan has trebled from \$12bn in 1980 to \$32bn last year, with that with the rest of Asia doubling from \$20bn to \$40bn. Germany, facing the cost of unification, is expected to shift from a \$47bn current account surplus last year to a deficit averaging \$20bn for the first half of the 1990s. Italy's deficit is seen to grow from \$6bn last year to \$26bn in 1995.

Volvo Trucks near Thai plant decision

By John Griffiths

VOLVO Trucks is expected to decide this week to proceed with building a commercial vehicle production and assembly plant near Bangkok.

The Swedish manufacturer has already formed a new wholly-owned subsidiary, Volvo Truck (Thailand), which would oversee the project. According to Volvo, the Thai government's Board of Investment has already given its approval to the project. So far, Volvo has not specified the size of investment which would be involved.

By setting up local production, including component manufacture by local suppliers, Volvo would be able to bypass tight Thai restrictions and high taxes on imports of built-up vehicles. Currently, it sells 300 trucks and buses a year in Thailand. If the production project goes ahead, it hopes to hit sales to 2,000 a year by 1994. The Bangkok plant would also be the main supply source for the Japanese market, where Volvo sees sales of 1,000 units a year, also by 1994.

It would also be expected to give Volvo a foothold in other Association of South-East Asian Nations (Asean) states. These states, including Brunei, Indonesia, Malaysia, Philippines and Singapore, as well as Thailand, are regarded as one of the fastest growth regions for vehicle makers.

DAF, the Dutch truck maker, has already signed initial joint venture agreements in Thailand, Malaysia, the Philippines and Brunei for component making projects needing investment of over \$200m (£105m). These have yet to be finalised, however. They come under a wide-ranging industrial joint venture programme being developed by Asean as part of efforts to create a free trade area.

The projects in which DAF is involved call for manufacture of different but complementary truck components, including diesel engines, in the four countries involved. These would be shipped between the participant countries, eventually allowing local assembly of trucks in each. The ultimate logic of the ventures is an integrated, truck-making industry for the region.

The Volvo project would also draw on a variety of component suppliers, in several Asean states, to provide the minimum 40 per cent "local" content needed for production in Thailand.

The new company, to become the centre for all Volvo's Far Eastern operations, would take over from local importer Swedish Transport Company. A managing director, Mr Rolf Sterner, has already been appointed. He formerly headed Volvo assembly operations in a number of third world countries, including Iran and Brazil.

Volvo already has truck import ventures with Daewoo Motor of South Korea and Isuzu in Japan.

US Congress set for sparring over tax cuts

By George Graham in Washington

REPUBLICANS and Democrats are preparing for 10 days of fierce sparring over the best kind of tax changes to stimulate the flagging US economy.

Although Congress is in recess, two of its key tax committees are planning hearings this week and next to explore various proposals for tax cuts. These range from the package built around a cut in the capital gains tax rate, put forward last week by conservative Republicans in the House of Representatives and cautiously endorsed by President George Bush, to variations on the Democratic theme of a \$200-\$350 tax credit aimed at middle-income families.

The Democratic leaders in Congress have seized on the tax debate as an opportunity to attack President George Bush for inaction on the economy, but the argument could swing to favour the Republicans. Democratic chiefs have argued that a capital gains-tax cut would overwhelmingly favour the rich, but many more pro-business Democrats might be persuaded to back such a cut to stimulate the economy, leaving Mr Bush as the political winner. Several of the Democratic contenders for the party's presidential nomination next year have swung behind one form or another of a capital gains tax cut.

Mr Paul Tsongas wants a

Rostenkowski: Credits now

capital gains tax rate that falls with the length of an investment. Governor Bill Clinton of Arkansas, front-runner on the Democrats' moderate wing, favours a 50 per cent capital gains tax allowance for investments held longer than five years.

Even Governor Mario Cuomo of New York, who has not yet announced whether he will run for the presidency, has argued for lower rates on long-term investments, offset by a higher levy on short-term gains.

Between these positions and the capital gains tax proposals of the Republicans, there could be room for negotiation.

The Republican package

would phase in reductions over three years. In the first year, it would allow a 30 per cent allowance for gains on assets held more than one year. By its third year, however, the 30 per cent allowance would apply only to investments held longer than three years, with lower exclusions applying to shorter term investments.

Mr Bush said last week that he enthusiastically supported the Republican package, yet he remains less strongly committed to this as the right thing for the economy than he is to not being stampeded into doing the wrong thing.

The president's definition of the wrong thing probably includes the kind of middle-income tax credits proposed by Mr Dan Rostenkowski, chairman of the House ways and means committee, and by his Senate counterpart, Senator Lloyd Bentsen. Mr Bush would oppose such credits, especially if they were to be paid for by higher marginal income tax rates and a surtax on incomes over \$1m a year, as Mr Rostenkowski has proposed. The president's supporters argue these would be costly, but do almost nothing to lift the economy.

"We think the primary thing is to stimulate the economy. If the Democrats' objective is merely to redistribute, then we have a problem," said one Republican aide.

The business of trying to nail Noriega

Henry Hamman reports from Miami on the long trial of Panama's former strongman

AFTER nearly three months of testimony at the drug-trafficking trial of General Manuel Antonio Noriega, the US government's case against the Panamanian former strongman revolves around one issue - money.

Dozens of witnesses, including a high-ranking member of the Medellín cocaine trade cartel and a Panama City customs officer, have told their stories in the Miami federal district court. Their testimony mentions hundreds of millions of dollars alleged to have been paid in bribes, used to buy protection, deposited in Panamanian banks, delivered in suitcases, or flown in executive jets and cargo flights.

The government alleges that Gen Noriega conspired with the cartel to ship cocaine to the US, to launder profits, to protect cartel members from other governments, to transport chemicals used in manufacturing cocaine, and to operate a cocaine laboratory in the Panamanian jungle.

According to government witnesses, the general collected large amounts of cash for all these activities.

So far, the government has not estimated how much money it believes Gen Noriega earned by, so it is alleged, putting his country at the service of the Medellín cartel.

But one witness alone, Mr Ricardo Belonick, former Panamanian diplomat turned drug smuggler and money launderer, claimed the general was paid \$10m for letting 20 drug flights leave Panama for the US.

Others have alleged that he received payments for allowing the cartel to use Panama's banks to launder hundreds of millions of dollars of drug profits. The general has also been accused of selling protection to cartel members when they

Those were the days: General Noriega and entourage in charge in Panama

were under pressure by Colombian authorities.

The picture of Gen Noriega put to the jury is that of a man who used his positions as head of military intelligence and later as Panama's ruler to amass a vast fortune.

So far, however, the government has not produced any witness who has been able to testify directly to having handed Gen Noriega any of the money he is supposed to have been paid.

Because part of the prosecution is being brought under the conspiracy law on Racketeer-Influenced Corrupt Organizations (RICO), the government has been allowed to introduce hearsay evidence of payments.

In non-RICO cases, such testimony is generally not permitted.

While the case against Gen Noriega has focussed on the money he is alleged to have made from turning Panama over to drug traffic, the trial has also produced allegations of wide involvement by Central American and Caribbean government officials and politicians in the narcotics trade.

Judge William Hoeweler has allowed the prosecution considerable freedom in putting its case. The judge, who enjoys a reputation for granting attorneys latitude, has said he is seeking to conduct this trial like any other drug prosecution, avoiding making it a

political case.

Sticking to that resolve could make it difficult for the defence to follow its announced strategy of arguing that, whatever US law Gen Noriega may have broken, that was with the acquiescence or encouragement of US officials.

However, during the testimony of Mr Carlos Lehder Rivas, a former member of the Medellín cartel now serving a US prison sentence, the judge did allow - over repeated government objections - testimony that the cartel had paid \$10m to the Nicaraguan contra rebels while the US was supporting the contras in their fight against the Sandinista government in Managua. The

judge also allowed the defence to ask Mr Lehder if the cartel had shipped drugs via an airstrip on a Costa Rican ranch which has been named as a landing zone for US weapons going to the contras.

In examining Mr Lehder, the defence also resorted to another tactic it has used repeatedly - that of questioning the credibility of witnesses, based on the deals they have made with the government.

Many of the witnesses against Gen Noriega are convicted drug traffickers or are under indictment. The defence has made much of the government's concessions to these witnesses in return for testimony. In several cases, immunity from prosecution, the right of residence in the US and financial concessions have been granted in return for evidence against Gen Noriega.

During all this, the jurors sit impassively, many of them taking notes. Despite the publicity surrounding the trial, they are not being sequestered.

Although the government is now expected to call fewer than a planned 80 or more witnesses, it seems unlikely its case will be complete much before Christmas.

The duration of the defence case will depend largely on the willingness of the judge to open the trial to evidence about the behaviour of US officials and intelligence agencies.

Even after this long trial has ended, the general will have other legal battles. He is under indictment in Tampa, Florida, on a charge of marijuana smuggling, and he is the defendant in a civil suit by the new government of Panama, claiming that he diverted money from the Treasury to his own pockets. Also, he is a key figure in another civil suit by the Panamanian government against the Bank of Credit and Commerce International.

Quebec receives economic warnings

By Bernard Simon in Toronto

THE Canadian government is stepping up its warnings that Quebec will face heavy economic costs should it split from the rest of the country.

In his most aggressive attack on the francophone province's separatists, Mr Brian Mulroney, the prime minister, said in Montreal on Sunday that a sovereign Quebec would be excluded from the 1989 US-Canada free trade agreement and would have to negotiate its own deal with Washington.

Mr Mulroney has also reiterated suggestions by separatist leaders that a sovereign Quebec would be able to share a common currency with Canada, or that Quebecers could carry Canadian passports. The Quebec national assembly decided earlier this year to hold an independence referendum by October 1992, if no acceptable offer for a restructured federal system was received from the rest of the country.

Federalists had hoped that a vote could be forestalled if a suitable package was presented to Quebec during the course of next year. The government has now accepted however, that a referendum is probably

unavoidable. Separatist fervour has lost some steam in recent months, but it could quickly revive if Quebecers perceived an unwillingness among English-speaking Canadians to make concessions in a new constitutional package.

A parliamentary committee trying to test public opinion on a set of proposals has been bogged down in disorganisation and partisan squabbling.

Mr Mulroney's warnings mirror the strategy used by the then prime minister, Mr Pierre Trudeau, in the previous referendum campaign in 1980. "An independent Quebec would be precisely that."

"Independent, economically weakened and alone, in a world where globalisation demands unity and competition demands strength," Mr Mulroney said.

Quebec business groups were among the most enthusiastic supporters of the 1989 free trade agreement.

But Mr Mulroney said that "an independent Quebec would not sweep into Washington on Canada's coat-tails, nor would the US give Quebec what it wants because it once was part of Canada."

Paraguay's ruling party in control

PARAGUAY'S ruling Colorado party looks set to dominate an assembly to rewrite the country's 1987 constitution, drawn up under the dictatorship of General Alfredo Stroessner. Early returns yesterday gave the Colorado an estimated 58 per cent of the vote, held on Sunday, John Barham reports from Buenos Aires.

The assembly is to try to create the first charter for democracy in the country's 180-year history. Gen Stroessner was toppled in 1989.

The turn-out was low on Sunday, despite a growing clamour for a reduction in the military's power and indignation over the alleged influence of President Andrés Rodríguez's family and associates. Disenchantment is also growing as the economy slows and inflation rises.

However, the Authentic Radical Liberal Party, the main opposition, took only 28 per cent of the vote.

Analysts say there is wide consensus on constitutional issues such as the need to bolster the judiciary and reduce the executive's wide powers. There is, though, much dispute over electoral reform, which the opposition hopes will reduce the power of the Colorado party machine.

Brazil debt talks set for this week

Brazilian government officials and leading bank creditors are set to meet in New York this week to start negotiations over a restructuring of the country's medium and long-term bank debt, writes Stephen Fidler.

This comes as the government is expected to announce tomorrow a letter of intent for a stand-by loan of some \$2bn by the International Monetary Fund. That is unlikely to be approved by the IMF board until early next year, if certain agreed legislation is enacted.

Mr William Rhodes, Citicorp vice-chairman, said the announcement of the letter of intent would add "a positive atmosphere" to the talks. Of Brazil's total \$107bn foreign debt, \$55bn was owed to banks at the end of 1990, although \$11bn of this was short-term.

Radicals take Argentine province

Voters in Argentina's impoverished north-western province of Catamarca voted in the opposition Radical party at the weekend, ending the 40-year rule of the province's leading political family, writes John Barham.

The Radicals took 55 per cent of the vote, while the former governor, Mr Ramón Saadi, polled only 34 per cent. The Saadi clan's domination of Catamarca ended after the suspicious death of a 16-year-old girl was linked to the government, causing widespread protests that led to Mr Saadi's removal from power by federal authorities earlier this year.

Voting in Catamarca and Tierra del Fuego was the penultimate round of mid-term congressional and gubernatorial elections. A run-off poll will be held next week in Tierra del Fuego because no party won a clear majority.

Financing major projects - BNP's global role.

Balance sheet size, client base and branch network all shape a major bank but it is the vision and size of the projects financed by BNP that make it a truly global bank.

These are some of the major projects currently financed by BNP throughout the world:

- Cogen Technologies - USA:** USD 500 million. BNP is Arranger and Underwriter for this large natural gas co-generation project (614 MW).
- Cananea - Mexico:** USD 500 million. BNP is Arranger and Underwriter of a Debt/Equity swap for one of the world's largest copper mines.
- Hotel Meridien - Barcelona - Spain:** ESP 615 billion. BNP is Arranger and Agent for non-recourse facilities to finance 218 room 5 star hotel.

Lead managers for:

- Mexico:** Tuxpan thermal power station (GEC Alsthom) - FRF 2.2 billion.
- China:** Pingguo aluminium plant - FRF 250 million.
- Hainan Airport (SPIE Batignolles)** FRF 250 million.
- Morocco:** Jorf Las Far thermal power station - FRF 1 billion.
- O.N.P.T. Alcatel - central telephone exchange** - FRF 350 million.

UK looks to overseas health care

By Alan Pike

MANAGEMENT consultants are working with some UK health authorities to see whether overseas experience of alternative ways of delivering hospital services could be applied in Britain.

Mr Michael Malone-Lee, National Health Service director of corporate affairs, told a FT health care conference in London yesterday that greater attention to matching work demands to the capacity of individuals could bring improvements of 20 to 30 per cent.

Mr William Waldegrave, health secretary, said that increasingly common solutions to health care problems were being adopted globally.

He said international comparisons showing relatively low health expenditure in Britain often concealed that a high proportion of the nation's total health spending came from public finance. In Britain the private sector funded only 13 per cent of health care compared with 25 per cent in France, 27 per cent in Japan, 28 per cent in Germany and 68 per cent in the US. "The figures, if you like, measure the success of the public health system in Britain in restraining the growth of the private sector," he said.

Cabin crew vote for industrial action on BA

BRITISH AIRWAYS flights could face disruption after members of cabin crew voted last night to stage industrial action over management plans to change working patterns.

Leaders of the British Airways Stewards and Stewardesses Association (Bassa) said domestic and international flights could be affected by a series of mass meetings sanctioned by the ballot which have to be held within 28 days.

Bassa members, who comprise about half the 9,000 cabin crew staff employed by British Airways, voted by 2,070 votes to 564 in favour of holding the meetings.

Leaders of Bassa, which is part of the Transport and General Workers' Union, say the company is seeking to reduce minimum rest breaks on short haul flights and increase maximum flight times on long-hauls. The proposed changes are part of a series of cost-cutting measures.

In some cases, the union says, the changes would mean that BA would be implementing the minimum conditions required to comply with Civil Aviation Authority requirements.

On short range flights, the union says, guaranteed breaks between flights would be reduced to 1 hour 45 minutes.

The maximum shift on a long flight would increase from 16 to more than 21 hours.

British Airways would not comment on the detail of its proposals, saying they were still under discussion. It confirmed, however, that it was looking for increased efficiency and wanted more flexibility from its cabin crew members.

In common with other airline companies, BA has been suffering severely during the recession. Earlier this month it reported that pre-tax profits in the first half of the financial year were - at £185m - 42 per cent lower than the corresponding six months of 1990.

Two years ago BA's European and UK domestic services were disrupted when short-haul cabin crew held a 24-hour strike in support of an air stewardesses who was sacked for alleged irregularities in the conduct of an in-flight bar.

In an out-of-court settlement, several months after the dispute had been settled, the stewardess was offered her job back.

By Daniel Green

BRITISH MIDLAND Airways, the UK's second biggest scheduled airline, yesterday threatened to end flights to three UK cities from London Heathrow to make room for new services to Brussels and Frankfurt.

The move comes after several unsuccessful attempts to gain extra landing slots at Heathrow to operate the international flights.

The destinations under threat are Liverpool, Birmingham and the East Midlands. British Midland (BM), which is 25 per cent owned by Scandinavian Airlines Systems, runs the only scheduled flights from Heathrow to these three airports.

"If we are unable to obtain sufficient slots for the new European services, we may have no alternative but to withdraw or reduce our services to these cities," said Mr Austin Reid, BM's managing director.

The carrier plans to start scheduled flights from London to Brussels and Frankfurt at the end of March.

Before abandoning the three domestic destinations, BM intends to ask the UK Department of Transport and Civil Aviation Authority to instruct British Airways to give slots to BM for the international routes.

Earlier this year, the government forced the transfer of

British Midland issues warning on airline slots

Passengers at Heathrow pass an advertisement for British Midland, which is threatening to cut services to three cities

and the airline says fares there have already fallen by a third. British Airways said yesterday that it did not object to competition for the slots but did object to substitution - the straight transfer of slots from one airline to the other.

"We will vigorously resist cutbacks or restrictions on our services," British Airways commented.

BM already operates to Paris, Dublin and Amsterdam

BM failed last week, at the

twice yearly airport slot allocations conference, to win enough Heathrow slots to operate to Brussels and Frankfurt.

BM received all the slots at Brussels it asked for, but only some of those it wanted at Frankfurt.

The International Air Transport Authority (Iata) reported yesterday that passenger numbers in October showed their first monthly rise

this year.

Passenger traffic worldwide rose 3 per cent in October, with Asian carriers showing the greatest gains. But Iata warned that airlines still had "many painful months ahead".

Mr Gunter Eser, Iata director general, said: "This is the long-awaited encouragement for the industry, but such late growth cannot make a big difference to the year's traffic results."

BRITAIN IN BRIEF

UK, France to develop new frigate

Britain and France are to collaborate on the development of a new naval frigate which will enter service early in the next century. The frigate will be equipped with a new type of air defence missile system and its task will be to escort and protect maritime forces. The decision to proceed with exploratory work follows a year of talks.

Governor seeks 3% inflation

Britain should reduce its annual rate of inflation to below 3 per cent to be able to compete on international markets, Mr Robin Leigh-Pemberton, the governor of the Bank of England has said. The UK should aim initially to get inflation down to the 3 per cent rate achieved between the Korean and Vietnam wars "but this will not be enough. Some of our competitors have even lower rates" he said.

Car production rises by 1.8%

UK car production rose by 1.8 per cent in the first nine months of the year, boosted by the rapid build-up of production by Nissan, the Japanese car maker, at its north of England assembly plant. Nissan output in the first nine months at 92,389 was 91.6 per cent higher than a year ago according to figures released by the Society of Motor Manufacturers and Traders. Overall, car production rose from 944,382 from 928,005.

£70m paid for ECGD division

The government is to be paid £70m for its sale of the ECGD's short-term credit insurance arm, Mr Peter Lilley, trade and industry secretary, has said.

Warning of teaching cuts

Teachers' employers in England and Wales have claimed that the amount of money available to fund pay rises for teachers' next year was only 3.7 per cent more than this year, just over half the 7.1 per cent increase in education spending announced last week by Mr Kenneth Clarke, education secretary. The National Employers Organisation for School Teachers warned that cuts in the number of teachers might be needed if the independent teachers' pay review body made an award for April 1992 in excess of 3.7 per cent.

Work to stop on nuclear plant

Scottish Nuclear, the state-owned company which operates Scotland's nuclear plants, is to stop engineering work devoted to the possible reopening of Hunterston A magnox plant, which closed in March 1990. The company believes market conditions in the electricity industry are too uncertain to make reopening the plant a viable proposition, at least in the next two to three years. The team which had been studying the reopening of the plant for the past nine months is stopping work and decommissioning will continue.

Accountants hit by recession

Small and medium-sized accountancy firms in London have been severely hit by the effects of the recession, with fee income down 10 per cent and collection rates slowed by 54 per cent during the last quarter, a survey conducted by the London Society of Chartered Accountants shows. Consultancy and investment business fell 10 per cent in the four months to 31 October, while insolvency work rose by 30 per cent and tax work rose by 22 per cent. One quarter of firms suffered a drop in fee income over the past four months, and few expected this to improve during the next quarter, according to the survey.

A mock-up of a train which could revolutionise rail travel across London has been unveiled. Mr Denis Tunnicliffe, managing director of London Underground, (pictured centre in the mock carriage with Sir Bob Reid, chairman of British Rail, left, and Mr Roger Freeman, transport minister) said: "The benefit of the new route will be with us for several centuries". The train, which has a computer able to diagnose problems before they occur, will run on the east-west CrossRail route by 1999.

Guinness trial may last longer

The trial of former merchant bankers Mr Roger Seelig and Lord Spens, which started on September 26 is likely to last until April 1992: it was expected to take three months. The issues raised by Guinness's 1986 takeover battle for Distillers, and the detail in which they had to be examined, were more extensive than foreseen, the judge told the jury sitting in south London.

Lautro to review rules

Lautro, the Life Assurance and Unit Trust Regulatory Organisation, and the Department of Trade and Industry are to review the conditions under which life assurance compa-

nies are allowed to call themselves mutual and to describe their policies as mutual. This arises from fears that customers may find it increasingly hard to understand when they are dealing with a mutual life assurance company in which all the distributable profits go to the with-profits policy holders.

Homelessness 'may double'

Homelessness will double over the next ten years unless radical changes are made to Britain's housing system, according to Shelter, the national campaign for the homeless. In a report marking its 25th anniversary, Shelter warns that the UK housing system has become increasingly imbalanced as a result of continuing failure to invest in affordable rented homes.

Opposition
pledge on EC
social policyBy Ralph Atkins and
David Goodhart

BRITAIN'S opposition Labour party would seek to implement the European social charter in its first parliament after winning a general election, believing the burden on companies would not be great, Mr Tony Blair, the party's employment spokesman said yesterday.

Over the past few days the UK government and almost all employers' organisations have been attacking plans to extend the scope of EC social legislation arguing that much of the planned legislation would be costly and destroy jobs.

Speaking ahead of today's council of ministers meeting on the proposed EC directive on working hours in Brussels Mr Blair accused the government of creating "scare stories".

The directive would not outlaw Sunday working, interfere with North Sea oil production, or cause problems for emergency services, he claimed.

Mr Blair also said that although the directive was unlikely to be passed by the council of ministers meeting today it could still return, and be passed by qualified majority by Christmas.

Labour would sign up to general principles but said detailed arrangements would be left to individual countries.

EC socialists
likely to drop
defence plans

By Ivo Dawney, Political Correspondent

NEGOTIATORS for the British Labour party appeared last night to have persuaded their European socialist colleagues to drop a potentially embarrassing call for closer Community defence links, including a right of consultation over nuclear weapons policy.

As leaders of the EC's Confederation of Socialist Parties gathered for a two-day meeting in Brussels, it emerged that a highly contentious passage in a policy statement, set to be agreed today, had been deleted.

The draft text had called for the EC to "stimulate the creation of new collective security arrangements that would cover the whole of Europe." This would include consultation on nuclear questions under a new European defence policy aimed at co-ordinating the strategies of member states.

With a general election imminent, Labour has been anxious to ensure that the Confederation avoids any pledges in its meeting prior to the Maastricht summit that could fuel Tory claims that Labour is ready to "sell-out" British sovereignty in order to win EC allies.

In particular, the party has sought support from its 13 socialist EC sister parties to by-pass any public commitments on economic and political union that go beyond declared party policy.

But socialist officials in Brussels said the Confederation will debate an extensive four-page document, intended to propel the 14-party grouping further down the path towards full European Union.

Mr Neil Kinnock, the Labour leader, will use the two-day meeting to reiterate his claims that his party is now at "the heart of Europe" while watering down those aspects of the policy text that could prove difficult to defend at home.

There remain several points of difficulty including the UK party's resistance to the transformation of the Confederation into a European Socialist Party.

Mr Paddy Ashdown, leader of the Liberal Democrats, will also be in Brussels today to agree a joint strategy with the 13 party European Liberal Democrats and Reformists. The group, which includes the German Free Democrats, is pushing for a federalist outcome to the Maastricht summit.

Newspaper
alleged to
have pirated
software

By Alan Cane

MIRROR Group Newspapers, which publishes the Daily Mirror in the UK and The European, is being sued for alleged computer software theft in the latest move by software suppliers against software piracy.

The Business Software Alliance (BSA) and the Federation Against Software Theft, which represents personal computer software suppliers, yesterday obtained a court injunction preventing MGN using or distributing software which appeared to have been copied illegally. The BSA identified such software during a nine hour raid on MGN premises last week.

The injunction applies until settlement of the writ served on MGN by the BSA alleging copyright infringement. In the meantime, MGN is to inspect other software for legality before any further action is taken.

MGN is contesting the writ. It denies that the software was pirated, and told the court yesterday it denied any liability.

Companies can be fined for software theft and, under laws passed two years ago, executives can be prosecuted for encouraging or condoning blatant software copying.

The BSA, following a six month investigation, secured an order, enabling it to enter and search MGN's premises for materials it believed were obtained illegally.

Computer software is easy to copy and a lively business has sprung up providing manuals for illegally copied software. The BSA calculates that illegal copying costs the software industry over £200m a year in the UK alone.

The BSA has carried out some 30 inspections in mainland Europe and software copyright is the subject of a draft directive being prepared in Brussels.

Mr Bradford Smith, BSA's European counsel said yesterday: "We announced in July that we would continue to bring cases against big corporations where we obtained strong evidence of widespread illegal copying. Today's announcement is a direct result of these continuing investigations".

Baker attacked over asylum case

By David Owen

MR KENNETH BAKER, the home secretary, ran the gauntlet of prolonged and raucous opposition calls to resign yesterday as he told MPs that he would appeal to the House of Lords, Britain's highest court, against last week's unprecedented ruling in which he was found guilty of contempt of court.

Speaking in the House of Commons, the embattled minister who is responsible for law and order, said he took full responsibility for the Home Office's actions in the case, which involved the deportation of a Zairian asylum-seeker.

He said the matter raised issues of "constitutional importance... which go far beyond the facts of the case which gives rise to them".

These concerned whether ministers and civil servants "acting in the course of their duties can be separated from the crown itself".

The court had recognised that the home secretary "had no intention to act in defiance of an order of the court, nor to hold myself above the law".

Mr Baker, who has looked particularly accident-prone during his year-long Home Office tenure, is the first minister to have had a contempt of court charge upheld against him.

Lord Donaldson, Master of the Rolls - the senior civil judge - said last week that the home secretary was in contempt because of his "personal decision" in May to cancel the asylum-seeker's return flight to the UK but that his culpability fell "at the lower end of the scale" because he had been

Kenneth Baker: faced repeated calls to resign

tempt because of his "personal decision" in May to cancel the asylum-seeker's return flight to the UK but that his culpability fell "at the lower end of the scale" because he had been

wrongly advised by lawyers.

The court imposed no penalty on Mr Baker other than asking him to pay the legal costs - a bill which the Home Office said it would meet.

Spearheading the Labour assault yesterday, Mr Roy Hattersley said that if Mr Baker had wished to remain within the law as he claimed, the proper course would have been to accept the ruling and then appeal, rather than flouting the court's judgment.

The shadow home secretary asked: "Are there no circumstances under which you would feel it right to take the honourable course and resign from the office which you discharge so inadequately?"

He predicted that his opposite number would be called upon outside the House to justify his "incompetence".

In between the torrents of opposition invective, Mr Baker was staunchly defended by a series of Tory backbenchers.

In a separate statement, the home secretary agreed to reconsider the decision to deport Mr Karamjit Singh Chahal, a leading Sikh campaigner, and promised that Mr Chahal would be given another opportunity to argue his case in the courts.

This followed a demand yesterday by a high court judge to look again at the matter. Mr Justice Popplewell expressed "anomalous anxiety" over Mr Chahal's case.

BCCI liquidators win more time

By Richard Donkin

THE provisional liquidators of the Bank of Credit and Commerce International have run up \$200m of overheads and expenses since taking over the bank in July a report revealed yesterday.

The report by Touche Ross, the joint provisional liquidators, was produced at the High Court yesterday which granted a further adjournment of winding up proceedings against the bank. The adjournment, unopposed by the Bank of England and creditors, was agreed to give provisional liquidators more time to negotiate a deal with Abu Dhabi on behalf of creditors.

Mr Brian Smooha, provisional liquidator for the Luxembourg holding company of BCCI, said that creditors of BCCI Overseas and BCCI SA,

the two main BCCI banks, might expect to get 10 per cent of a negotiated payout towards the end of 1992, with prospects of receiving 30 per cent to 40 per cent in the longer term.

He said that the bank had been in an "even worse condition than we expected" when he was appointed in July. Without a plan of action agreed with the Abu Dhabi majority shareholders, he said, prospects of achieving a worthwhile dividend for depositors had been remote and it might not have been paid until the end of the century.

The judge, granting the adjournment until January 14, said that the affairs of BCCI and BCCI Overseas had been inextricably intermingled. Worldwide co-operation was essential to realise assets to

the best advantage of creditors and to avoid long drawn-out litigation. He said that the BCCI group owed money to 800,000 depositors with 1.2m accounts in over 70 countries.

The Touche Ross report gave a precise figure for the first time on the estimated realisable assets which came to \$1.159bn against \$10.641bn total liabilities.

The report gave no estimate of what might be realisable in claims against First American Bancshares, the Washington-based bank which the US Federal Reserve Board says was secretly owned by BCCI.

Dr Adil Elias, chairman of BCCI Depositors' Protection Association criticised the fees and called the BCCI liquidation a "very substantial business indeed".

Political animal acknowledges cat calls

By Ralph Atkins

WITH the dignity of a recalcitrant cat, Mr Kenneth Baker, home secretary, yesterday accepted that he alone was responsible for the actions of officials and the junior minister caught up in his department's latest misadventure.

"Take him away," shouted one Labour MP in his best jailer's baritone. A chorus of opposition MPs shouted "resign" from the moment Mr Baker rose at the despatch box. Mr Speaker Weatherill had to intervene repeatedly to calm the baying of Labour MPs.

The home secretary explained to the Commons how he was to appeal to the Lords after the Appeal Court's decision last week that he was in contempt over the deportation of an asylum seeker. "I would like to make it clear to the

House that I accept full responsibility for the actions taken in this case," he said.

But Mr Baker - a political animal of proven fighting ability - was on familiar territory. He has faced calls for his resignation many times before, only to fight another day. The record at the Home Office has become so ridden with apparent calamities that even he accepts privately that his career has become "incident laden", if not accident prone.

Mr Baker has taken the rap - although not the blame - for the escape of two IRA suspects from Brixton Prison. He has been criticised for delays in introducing the bill to stiffen penalties for "joy-riding" by youngsters in stolen cars.

He overreacted to calls for the banning of dangerous dogs, creating confusion and anger over how many might have to die. Over the Asylum Bill, now passing through the Commons, he is charged by Labour MPs with excessive zeal in his bid to stem the mounting flow of asylum seekers.

With each crisis he has called in debts from political friends, and survived. It is not just Mr Baker's apparent insouciance that irritates Labour MPs. His ability to sidestep political flak has led to charges that he is ducking his responsibilities. He showed the "decline in standards of political integrity", Mr Andrew Faulds, Labour MP for Warley East, said yesterday.

Mr Baker was grateful for the support he had from the Tory benches. "Nobody could

believe that Mr Baker is capable of flouting the law," Mr Ivan Lawrence, Conservative MP for Burton, said.

Mr Alex Salmond, leader of the Scottish Nationalist Party, told Mr Baker: "Your credentials as a law and order minister are beginning to look rather threadbare."

Yet Mr Roy Hattersley, Labour's home affairs spokesman, is at a loss over how to react. A call for a resignation attracts headlines and undermines ministers' confidence but can quickly become valueless if repeated too often.

Perhaps Mr Hattersley knows the difficulties all home secretaries face - and he hopes to be in sitting in Mr Baker's chair at the Home Office not many months from now.

Unique to the industry, our driving simulator provides invaluable insights into aspects of in-vehicle safety.

Our concern for the future.

As the largest manufacturer of trucks over a tonne, we are keenly aware of our responsibility to the world around us. With a commitment to innovative research and careful design, we aim to ensure a clean and healthy future for all.

Mercedes-Benz have long been recognised as leading innovators in vehicle safety. Nearly three decades ago, the dual circuit brakes we

Thanks to our research,
the road is a safer place.

had developed went into production. And in 1981, our anti-lock brakes became available commercially. Our intensive programme of research and development is fundamental to our philosophy. Each year we invest over £250 million in research in the commercial vehicle sector, combining our concerns for safety, improved efficiency and environmental protection.

Take our TOPAS prototype tanker for example. Within this technologically-advanced concept strides have been made in many areas of safety, such as electronic tyre pressure control, differential lock, anti-lock braking and anti-skid control systems (ABS/ASR) - even a rear video camera which makes manoeuvring easier. And in conjunction with associate companies within the Daimler-Benz Group, body builders and our customers, we are actively exploring innovations in automotive technology, environmental protection, and traffic management.

Clearly, with such extensive resources in research and development, there would seem to be few problems in vehicle engineering we cannot solve. No matter what lies on the road ahead for European transport.

Committed to your success.

Mercedes-Benz
Trucks and Vans

TECHNOLOGY

Cracks in the system

The installation of electronic document technology - as with other innovative computer systems - is rarely smooth sailing.

Morgan Grenfell Asset Management, for example, recently upgraded its in-house publishing system to streamline its production of client reports. Although expressing overall satisfaction with the system - the department has doubled its output in three years without adding to staff numbers - Kerry Francis, assistant director, has reservations.

"We chose a system which on the face of it solved all our problems," says Francis. "But it created problems while solving others."

Morgan Grenfell has been using Rank Xerox equipment for several years to compile two of the three sections of its report - the analytic section written by the fund managers and the reconciliation sheets. But the valuation of assets held was provided by an outside bureau. This proved expensive and inflexible: if the figures were incorrect it could take days to get a new set.

The company can now produce sets of figures in two hours by using the Rank Xerox Publishing System (XPS). But the system has proven inappropriate to the department's needs.

Francis describes XPS as suitable for printing large volumes of the same report, such as car manuals. But "we will never be able to standardise our reports to that extent".

Morgan Grenfell produces up to 500 reports every month, but no two will be exactly the same. The department began using the XPS system to produce 40 monthly reports for its US clients, but plans to produce the remaining reports on XPS have been shelved.

Nevertheless, XPS has brought unforeseen advantages. Managers at Morgan Grenfell have had to alter the way they work, taking on more responsibility for quality control procedures. As Francis points out, "These are good management practices to have in place anyway."

DB

When Lothian Regional Council introduced its community charge - or "poll tax" - registration system it estimated that between 20 and 25 per cent of the register would change every year. The Council soon realised that details on 50 per cent of the residents in the Edinburgh area changed annually. The result was an administrative nightmare.

"It resulted in 1.2m documents coming into the department per annum on paper," says Ian Rogers, community charges registration officer. The council looked at streamlining the paper-based system. But in the end, says Rogers, it became clear that electronic imaging was the only realistic solution.

Now as correspondence or completed forms are received by the Edinburgh office they are scanned into an electronic "in-tray". Each document is indexed for filing and retrieval, with each dwelling given a unique identification number.

One advantage is that the work from the electronic "in-tray" can be distributed according to employee ability, says Rogers. "You can send the simple cases to junior staff, while the more complex ones are handled by senior staff."

Once the document has been processed it is filed on optical discs. Even though documents filed years apart would be stored on different discs, the indexing ensures that once the file number of the house is typed in, the complete file is retrieved from the discs.

Although optical filing is expensive, the Lothian application has saved the council £250,000 in overtime payments and part-time staffing to deal with the backlog, says Rogers, and a further £250,000 in filing space. More importantly, it means data is sent to the finance department rapidly.

Lothian Regional Council is not alone in facing a paper mountain. Some 86 per cent of business information is still held on paper, according to the Association for Information and Image Management in the US. Computer systems have compounded the problem because they are so good at churning out paper.

Companies that have shown particular interest in imaging systems are those that handle what Ken Ollis, general manager of Wang Europe, calls "high value" paper - cheques, invoices, receipts - in particular in the financial sector.

But widespread use of imaging systems in offices -

Della Bradshaw describes how document imaging can make paper files a thing of the past

Speed is of the essence

"enterprise-wide processing" as it is often called - is unlikely to happen until the cost of specialised image-handling workstations falls, says Ajit Kapoor, vice-president of the image management strategy service at Connecticut-based Meta Group. Today's workstations cost about \$7,000 each.

As a result optical processing has been most readily accepted in specific applications within companies.

The Co-operative Bank in the UK, for example, is in the process of introducing an optical system to help staff verify the signatures on high-value cheques. When the cheques are scanned into the system,

image installed base by industry in US

1991 revenues \$2.22bn

Source: Meta Group

sent overnight to the Co-op's main processing centres, the main computers will pull off the account number and other details for the cheques. It will then retrieve the stored signatures of each of those account holders from the optical discs and send them to an image-handling terminal in the same sequence as the cheques will appear on the desk.

"The individual will just press a button and the signature will appear on the screen so that it can be compared visually with the next cheque on the pile," says David Dunlop, resources and planning controller. With the paper-based system staff have to retrieve the paper signature

file for each account holder.

These niche applications can offer a safe route to "enterprise-wide" document imaging, says Errol Roderick, European product manager for computer-related systems at Bell & Howell. "Many people put in a small filing system and then link it to different departments. They then modify the way they process the documents, meeting each other half way."

One company pursuing such a route is insurance company Norwich Union. When it decided to open a second office in Sheffield it had to enable staff in South Yorkshire to see the client files held in Norwich - many in paper form.

Having already begun to look at document imaging as a way of handling the enormous amount of paperwork generated and received in the insurance industry - "we're effectively a paper factory," says David Gibbs, organisation and methods manager - the company decided to use imaging technology between the two offices.

"When someone wants a file we capture it on image, and then it is on the system for all time," says Gibbs. "Eventually we will see the majority of our records on the imaging systems as a result."

If employees in Sheffield want to look at a file, they inquire over the computer network whether it is already on optical disc. If so, they can get access to it directly from the IBM-based computer system sited just outside Norwich. If not, the file is scanned on to disc. Both paper files, and those held in "micro-jackets" - 16mm microfilm - are scanned in. Norwich Union has 25m microjackets filed away, each one containing up to 20 images.

The Norwich example demonstrates that companies do not need to put all their old paper files on to optical discs at once. "Companies have to

Piled high: sifting through the paper mountain

decide which are the key documents and convert those," says Roderick. Generally the key documents are those that need to be retrieved quickly - retrieving from an optical disc takes seconds, from microfilm or paper it can take hours or even days.

For Norwich Union the extended use of document imaging promises further benefits. "If we capture the paperwork when it first hits the company we can control what happens to it," says Gibbs. "With paper it's not that easy."

By using codes for each completed form it should be easier for the company to know automatically which queue to put the document in for processing. And documents can be processed on priority grounds. "We won't lose things at the bottom of the pile."

Gibbs also points out that it will enable the company to introduce a disaster recovery service, by holding back-up discs at a secure sight in case of fire. "I would doubt whether companies would keep more than one paper copy."

Ultimately Gibbs hopes the system will improve productivity, help estimate manpower more effectively, improve cash flow and - most important - help improve customer relations. "Ultimately we will be able to deal with inquiries when people phone up," says Gibbs.

Using a paper-based system such customer service is almost impossible, says Clive Vinson, of SD-Scicon. "Some widely accepted figures are that in customer service com-

panies 70 per cent of the time taken in responding to a customer inquiry is spent in locating the documents. And 28 per cent of that time is taken up because the document has been mislaid. That means it can sometimes take a couple of days to respond to an inquiry."

Norwich Union standardised on IBM hardware for its imaging system. As a result Gibbs foresees no problems in integrating the system with other IBM hardware used by the company, for accounts, for example.

Other companies are not so fortunate, says Kapoor, in integrating their imaging system with their data processing system because of the "junkyard of software interfaces". However, he concedes it is just "a matter of time" before the standards issues are resolved.

Further developments in imaging are focusing on intelligent character recognition, so that incoming documents can be filed automatically - according to an index number or company name, say.

Nearer to hand are moves to integrate facsimile with image processing. In the case of the Co-operative Bank, for example, fax technology could help the bank extend its signature verification technique into the branches when a customer wants to cash a large cheque. The appropriate "document" could be sent to the branch from the main processing centre on request.

An article on document imaging in the engineering field appeared on November 26.

POCKET COMPUTERS

Little DIP takes a bow

By Della Bradshaw

Should a pocket PC be more than just an electronic diary and address book? Distributed Information Processing (DIP) clearly believes it should.

With its Pocket PC, also sold by Atari as the Portfolio, it has developed a hand-held gadget intended to complement the desktop machine.

Plug the parallel peripheral into the side of the Pocket PC, and the connecting wire into that, and even the most computer illiterate can transfer data between the pocket machine and a PC. Plug in the modem and data can be sent over the phone line to a remote computer system.

DIP insists that the mini machine, less than eight inches in length, cannot replace a full-sized PC. Anything more than filling in the names and addresses of a few contacts in the built-in address section would prove arduous.

However, because the keyboard is laid out in a qwerty format it is much easier for the inexperienced two-finger typist to input information than with an alphabetical keyboard plan.

Other built-in applications are a text processor, time manager, calculator and spreadsheet. The latter, compatible with the Lotus 1-2-3 package, was developed by DIP.

Although the data is displayed in an altered format, by holding the Pocket PC up to the phone receiver and pressing the appropriate keys the machine sends out a series of "blips" to dial a chosen phone number from the address book.

The least expensive machine, incorporating these five basic applications, costs £178. From there things start getting expensive.

DIP is targeting the machine at business users and at particular market segments, such as the financial sector, which need to run extra programs. A machine with 512K of internal Ram (random access memory), which would be needed for this sort of applications, costs \$299.95 without VAT.

On top of that extra storage requires solid state memory.

cards, about the size of a credit card. They are not cheap either: a 128K card, which would store some 50 closely-typed A4 pages, costs £113.

Although the machine on its own is relatively compact, it is difficult to imagine any business person running the line of a new suit by carrying the 1lb unit around in a pocket. A more expensive Pocket PC will buy you a range of add-on accessories and even a briefcase to carry them in.

Although developed in 1989, and first launched in 1989, the Pocket PC still has an impressive battery life. Given ordinary use the makers say that three AA batteries should last about six weeks. When not in constant use the screen, housed in the lid of the clam-like machine, turns itself off. By pressing any key the last screen automatically returns to the last data used.

The screen, which takes up to eight lines of text or figures, is relatively easy to read, and can be made lighter or darker by pressing a combination of buttons.

One complaint is the clarity of the documentation. Perhaps because DIP intends its machine for use by those who already have PCs the instructions range from the sublime to the ridiculous. Page two of the "Getting Started" section explains, complete with diagrams, how to open the machine and which way up to hold it. By the time you get to page four the instructions are already recommending that you configure the size of the machine's Ram disc.

For the layperson a companion book, containing simpler instructions, costs £15.

The series began on November 26 and continues next week.

EUROPEAN SAVOIR-FAIRE

New Perspectives and Exciting Opportunities

The whole of Europe is taking on new and exciting dimensions. The European Community is in the process of creating the world's largest unified market. And the revolutionary changes in Eastern Europe are paving the way to a spectrum of new opportunities.

Meeting these challenges will require the strong support of banks with substantial resources and a proven European savoir-faire. Deutsche Girozentrale - Deutsche Kommunalbank - is such a bank, being a central institution of Germany's savings banks - the nation's largest banking sector.

As a European public-sector financing institution, DGZ serves a growing clientele of corporations, banks, and government entities. The Bank provides a wide range of commercial and investment banking services, including major syndicated fund-raising operations.

Through our full-service branches in Berlin and Luxembourg as well as a wholly-owned subsidiary in the Grand Duchy, DGZ offers the full scope of Eurobanking capabilities in line with individual client needs.

مكثام النحل

When you're looking for a wagon, consult an expert.

In your search for a family car, you read **magazines**. Ask all your neighbours questions. All your colleagues, too.

Perhaps you forgot **consult** the expert that's by your side all the time. The **that** always sits in the back.

Place him before **Primera Wagon**. He'll just sit there, admiring the beautiful, smooth shape.

Until you open the hatch door. Watch how he easily slips through the wide tailgate. Notice him sniffing the carpet. (Don't worry, it's stain resistant).

Now **behind** the powered steering wheel. Yes, you. Fire up the available 2.0-litre, 16-valve engine and **your** dog's tail will start wagging to and fro. Once **the** road, **he'll** have **to** strain to hear wind and road noise.

Open the electric windows, he'll stick his head out **to** check the windflow, no doubt. But don't test the ABS until he's

safely inside. Now that everything has been checked, he'll stretch **in** the back. Where thanks to a unique **suspension**, the floor is completely flat.

Pampered with all this comfort, he'll fall asleep. Consider it **a** sign of approval.

Primera Wagon.
The best friend of the family.

shown Station Wagon. Specifications may vary in every country.
The Nissan Primera is **in** 4-door Sedan, 5-door Hatchback and Station Wagon models.

MANAGEMENT: The Growing Business

Twilight world of hard work

Charles Batchelor looks at the latest research

After more than a decade of intense interest in enterprise and the small firm, is there anything still left to discover about the entrepreneur? Yes, a great deal, according to the more than 200 academics who attended the 14th National Small Firms Policy and Research Conference in Blackpool at the end of last month.

The researchers presented nearly 100 papers on subjects as diverse as the psychology of the entrepreneur, training, minority businesses, predicting failure and the family firm.

Prominent among the research presented were findings from a £1.4m programme, funded mainly by the Economic and Social Research Council (ESRC). This is the ambitious small firms research programme of the Bolton Committee Report of 1971, which revived interest in the sector. Now just half way through its four-year life, it is beginning to generate in-depth research which has been lacking in the past.

A gloomy picture of the contribution of enterprise to the economy was painted for young people by Robert MacDonald of Durham University. He painted a depressing picture of youth enterprise in Cleveland, an area which has traditionally depended on large manufacturing companies such as ICI and British Steel which have suffered large-scale redundancies.

During the 1980s, Cleveland witnessed an amazing proliferation of government schemes to replace a "dependency culture" with an "enterprise culture" of new, small firms. More than 100 agencies in the region claimed to be involved in youth enterprise.

About 10 per cent of start-ups were successful businesses but 70 per cent "plodded along" while 10 per cent failed. One repair business failed leaving its young owner with debts of £5,000 which he was paying off from income support.

Young people starting in business were disadvantaged by their youth, their class and their locality, MacDonald said. They were competing with larger established firms from the "black economy" and from other participants in government schemes setting up similar businesses.

"For the clear majority of youth enterprise, neither glorious success nor failure is a twilight world of hard work, low pay, casual labour and insecurity as young people plod along, trying to secure a living through enterprise."

There was also little comfort in a second study of small businesses in Cleveland which concluded that while the quantity increased during the 1980s, there was a decline in quality. More than 3,000 businesses were started in the area in the five years to 1989, compared with just 1,100 in a similar period up to 1984.

But no more than one quarter of the businesses set up before 1984 were involved in full-time hairdressing or motor-related activities such as car and parts sales, repair and scrapping,

according to David Storey of Warwick University's Small and Medium Enterprises Centre.

More than 10 per cent of entrepreneurs were unemployed or likely to become unemployed when they set up their business, MacDonald said. Business owners and managers had previous business experience.

"We are concerned that many of the businesses are significantly smaller than their 1980 counterparts and they are heavily concentrated in sectors where the potential for growth is likely to be very limited."

If the two Cleveland studies showed the vulnerability of very young businesses managed by inexperienced owners, a survey of survival rates among manufacturing businesses in London confirmed the advantages of age and experience.

North of London Polytechnic concluded.

One study helped a business to survive. Less than half of firms employing fewer than 10 people in 1989 survived compared with two-thirds in 1984. Business owners and managers had previous business experience.

"We are concerned that many of the businesses are significantly smaller than their 1980 counterparts and they are heavily concentrated in sectors where the potential for growth is likely to be very limited."

If the two Cleveland studies showed the vulnerability of very young businesses managed by inexperienced owners, a survey of survival rates among manufacturing businesses in London confirmed the advantages of age and experience.

The rag trade and toy-makers had a difficult time in the 1980s but one sector where good news clearly outweighed the bad was business services. The number of management consultancies and market research firms more than doubled. The growing complexity of the business world, competition, the internationalisation of business and rapid technological change all contributed to increased demand for consultancy and research services, according to David Keeble of Cambridge University.

The capital costs of setting up in business services were usually low and could be met, for the most part, from personal savings. Most small business founders were able to bring professional expertise, an existing reputation and a network of contacts from their previous, usually large, employer.

New technologies played an important role in the growth of the sector. Cheap, high-performance personal computers, sophisticated software for data analysis and desk-top publishing equipment allowed small professional firms to compete on equal terms with large companies. Unlike small manufacturing or consumer services companies, which tend to supply local markets, small business services companies had a larger number of clients outside their immediate locality. The breadth of markets served by these companies suggested that they have a more important part to play in regional and national economic growth than has hitherto been recognised, Keeble said.

For small firms more in need of support, the Training and Enterprise Councils (TECs) represent a significant innovation in 30 years. The TECs have taken over the direction of training and small firms support at a local level.

But it was not clear that the way TECs were organised was the most appropriate for the task, said John Atkinson of Manpower Studies. For all the high expectations generated about the TECs' performance, they will be judged locally by local employers and the local labour market. The TECs' expenditure in the London area, for example, will have £10m-£11m to spend compared with an estimated £2m by local employers and a combined local authority spend of £1m.

Nor was it clear that the geographical areas covered by TECs, which were based on administrative boundaries, related to labour market boundaries. There was little reason to suppose that TECs were covering small local areas, but rather that they were covering large areas and another by-product of the TECs was to develop small business packages designed for particular sectors of the economy rather than concentrate on serving firms just because they are local, Atkinson said.

These findings supported the case for directing assistance at established, growing businesses rather than at small start-ups, Heath said. Support should also be tailored to meet the needs of specific business sectors.

Venture capital

In search of friends

By Charles Batchelor

Britain's venture capitalists are feeling unloved. The industry has an image problem and must become more professional in its marketing if it is to appeal to a wider range of entrepreneurs and investors.

These were the conclusions of a series of presentations to the annual meeting of the British Venture Capital Association last week. The association, whose members are experiencing their first downturn since the 1970s, had asked entrepreneurs, investors and bankers what they thought of venture capitalists.

Despite the unfavourable publicity about bank lending to small businesses, venture capitalists emerged as the preferred source of long-term capital for entrepreneurs who had other more readily available sources of finance followed by individual investors, corporate investors and, in fourth place, venture capitalists. They were unpopular because they were seen as demanding too much equity in return for their investment.

More encouragingly for the venture capitalists, entrepreneurs who had made use of venture capital were far more positive. Two thirds of those surveyed by London Business School said they would recommend it to a friend.

Entrepreneurs chosen to turn to venture capital for the reasons which the venture capitalists themselves like to promote. The venture capital industry prides itself on providing hands-on support and not just cash.

But when asked which factors influenced their choice of venture capital, entrepreneurs put the terms of the offer, (mentioned by 64 per cent) followed by "availability of funds for their expansion", with 44 per cent.

The promise of "cash help" was mentioned by only 22 per cent while, in answer to another question, 81 per cent said they were seeking "funding with a passive relationship".

The value of venture capital was not understood and, in the eyes of the entrepreneur, was little to differentiate between the different types of capital companies, he told the conference. Entrepreneurs saw price as the venture capitalists' main distinguishing characteristic. Once customers develop a better understanding of the venture capital industry, they will shop around more, Brayne warned.

The survey of bank managers and accountants revealed that less than half had ever met a venture capitalist while only 12 per cent had regular contact with them. Despite this poor score, 59 per cent of intermediaries would recommend venture capital because of the value it added to the media and the venture capitalists' mailings.

But overall, the surveys showed that the venture capital industry has failed to market itself properly, according to Stuart Brayne of Marketing Improvement, a consultancy.

The value of venture capital was not understood and, in the eyes of the entrepreneur, was little to differentiate between the different types of capital companies, he told the conference. Entrepreneurs saw price as the venture capitalists' main distinguishing characteristic. Once customers develop a better understanding of the venture capital industry, they will shop around more, Brayne warned.

Waking up to networks

Imagine a network of financial centres. Manchester, Leeds, Bristol, Guildford... Guildford? Does a sleepy town in the Surrey commuter belt really deserve a place alongside other more dynamic locations?

The answer will be "yes" if a breakfast club of local professionals, solicitors, accountants, bankers and a venture capitalist is the way.

Members of Guildford's professional community met on Friday morning in a local coffee house to discuss the Surrey economy and how to improve the local financial network.

If professional firms can work together more closely they can provide a better service to local companies, says Tony Cornall, Pannell's local managing partner. If the banker, accountant and solicitor involved in a deal all know each other they can act more quickly and more effectively than if they are dealing with a professional in London, he says.

London firms tend to be near the M25 motorway there is a greater demand for professional services in central London, says Tim Harcourt, local director of the Surrey capital company. Surrey also has a good spread of "old money" private companies with turnover of £10m-£20m as well as a growing number of high-tech businesses near the corridor.

Until recently Guildford's professional community was a low-key as many of the local businesses. Active promotion was not necessary during the booming 1980s but all are now anxious to boost their profile and business.

But are there not existing networks which could do the job as well as, or better than, an informal breakfast club? Apparently not. Many of the participants are members of the local chamber of commerce but they view this as representing the interests of small traders rather than professional advisers like themselves.

And is there not a danger that a club of this kind will mean the professionals are up to speed to serve up the local market? The breakfast club does not discuss individual deals but inevitably views and opinions are exchanged. The participants are adamant, though, that individual client loyalties are paramount.

They believe that by creating a local network of professionals, they will be able to improve the quality of service provided to the Surrey business community.

Can the military accept civilian political control?
Page 2

'We can move up the ladder',
says prime minister Anand
Page 1

Dreams, nightmares, breathing spaces

The country's economic growth rate is slowing down. February's military coup underlines the problems that Thailand faces in adjusting politically to the economic changes that are taking place, writes Victor Mallet

BANGKOK in late 1991 is the economic capital of the industrialised countries and their institutions and long on the developing world. It is also, in some respects, a nightmare.

The Thai capital is the heart of a dynamic economy, powered by Asian and western investment, which has successfully graduated from commodity exports and import substitution to a base for a diversified range of export industries.

Restaurants echo the sound of businessmen's mobile telephones, and the edifice of Colonel Sanders' Kentucky Fried Chicken outlet next to a statue of the Buddha on the main road.

But three years of double-digit growth between 1988 and 1990 have overwhelmed the city's transport and communications networks, clogging the streets with expensive traffic jams and polluting the air with poisonous fumes.

Opinions differ on the extent to which growth will be shown in 1991. Some analysts predict annual growth of about 8 per cent, while others point to sagging turnover in the shops and say the figure will be more like 6 per cent. There is widespread agreement, however, that a slowdown is desirable and inevitable.

Thailand has been sucking in imports, and not all of them

are capital goods for its export industry. The growth-fuelled current account deficit, which could amount to 11 per cent of gross domestic product next year, has become one of the main reasons of the technocratic government installed after the military coup of February.

While the state has restricted its foreign borrowing, the private sector has been eagerly securing loans from abroad. A liberalisation of foreign exchange regulations has not been accompanied by a free floating of the Thai baht and the risk of a devaluation is low, but there are those who say that borrowers may find foreign banks less willing to lend if political stability is not assured.

The government of the Thai country should also give the country a breathing space in which to ponder its future. Thailand faces industrial competition from lower-cost producers in Indonesia and southern China, and wants to turn up the technological ladder towards the level of South Asian economies such as Taiwan and South Korea.

But competition in the upper echelons is equally stiff, and Thailand is hampered by the inadequacy of its infrastructure and a shortage of skills at a time when technology is flowing between nations faster than ever and the process of developing nations towards prosperity seems to be assured in years rather than decades.

Some marketeers in Thailand believe that the

country's entrepreneurial skills and adaptability will carry it through; they prefer a public sector struggling to catch up with an energetic private sector to an administration which always allows the state to become flabby and dependent on the state.

Thailand has a Japanese-style vision of the future, an emphasis on the state and on what the country will do and to whom. "We must have a picture of where the economy is going in years from now," says Mr Chalongsob Sussangkarn of the Thailand Development Research Institute. "In our case it's very much laissez-faire - probably too much."

Wherever Thailand is going, several obstacles stand in its way. Transport and communications networks are being tackled by the construction of express highways and a new airport, and by the installation of more telephone lines. Thailand also has enough money to begin dealing with its environmental problems.

The royal family, the government, businessmen and ordinary citizens are all preoccupied with air and water pollution and the deforestation that have accompanied economic growth. It is characteristic of the national mood that great efforts were made during the recent festival of Loy Krathong (when floats of flowers and incense burners are set afloat in rivers) to persuade people to use biodegradable banana leaves

Thai in Bangkok

the Gulf war, in the of the world and above all to a natural correction after years of extremely rapid domestic growth, but the political uncertainty following the February d'état done nothing to encourage foreign or investors.

Some foreign observers, noting that there have been 18 coups since the end of the absolute monarchy in 1932, have begun to assume that Thai political manoeuvrings can be dismissed as irrelevant adjuncts to sustained economic growth, but Thais themselves - including the stock market - show signs of taking it all seriously.

Neither the relatives of Mr Thanong Phao-an, the president of the Labour Congress of Thailand who disappeared mysteriously in June, nor the pro-democracy activists who found severed dogs' heads in their gardens after demonstrations against the military-inspired constitution, are treating politics as a joke. Nor are the television journalists whose reports of the protest movement were censored.

"They say people are ignorant and ill-educated to understand democracy," declared Gen Chavalit Yongchaiyudh, leader of the Aspiration party, in a recent opposition rally in central Bangkok. "That's what they said in 1932. Why are these people still being used now, 59 years later?"

Mr Anand, the caretaker prime minister, by the military, about the military's former military leader, Gen Chavalit show how much progress has already been made.

A situation in which distance for the military is balanced by the corrupt practices of politicians is not without ironies - particularly when the military's role in the constitution - elected by April - but they also have economic policies of Mr Anand and his cabinet colleagues. "We are sorry they have to go in five months' time or even sooner," one banker wistfully.

floating of polystyrene for their floats.

However, education and training are longer than road-building or environmental protection. Three-quarters of the workforce will have only primary education or less by the year 2000, according to Mr Chalongsob, and the overall proportion would barely change even if 100 per cent of pupils went on to secondary education from next year (55 per cent at present).

A rapid school for Thailand to the level of Korea or Taiwan is a "pipe dream", Mr Chalongsob says, though he argues

that the situation could be improved by "a massive programme of training" for 6m existing workers over the next decade.

The ravages of the Aids disease will be only to worsen Thailand's skilled labour shortage. It is estimated that by the turn of the century between 2m and 4m Thais will have been infected with the Human Immunodeficiency Virus which causes the disease and more than half a million could have died as a result of Aids.

By no means all the news is bad. Thai businessmen have seized on the business

opportunities arising from the peace agreement in neighbouring Cambodia and the liberalisation of the Vietnamese and Laotian economies. Mr Anand Panyarachun, the prime minister, suggests that Thailand can become a staging post for Japanese and other foreign investors interested in Indochina, although there is always the danger that Thailand will find its neighbours, particularly Vietnam, turning rapidly into rivals.

Nor is Thailand always viewed favourably in the region. Having over-exploited many of its own natural

resources, the country's military businessmen are eagerly extracting timber from across Thailand's borders (supporting the process of otherwise isolated military rulers of Burma).

Mr Arsa Sarasin, the foreign minister, visited Cambodia in November and urged Thai businessmen not to take advantage of the Cambodians. The visit was interpreted by officials as an attempt to avoid the tarnishing of Thailand's image by unscrupulous profiteers.

The economic slowdown in Thailand may be attributable

THE WORLD MAY BE IN A RECESSION BUT NOBODY TOLD THAILAND.

While most of the world wrestles with recession, Thailand's economy is booming.

It is enjoying a period of unparalleled prosperity, with one of the fastest growing economies in the world.

This boom period is being export-led and investment driven, attracting leading foreign investors. In particular it appeals to those looking to relocate their production bases in preference to Japan, Taiwan and South Korea.

Incentives like tax-free periods make investing in Thailand an enormously attractive proposition.

Tourists, too, are being attracted in ever increasing numbers, contributing a total of US\$3,855m to the economy in 1989.

Thailand is exceptional in the diversity of interests it offers tourists, and so is unlikely to fall out of fashion after several years, usually happens with destinations enjoying such popularity.

Thailand's growth is mirrored by that of its airline, Thai Airways International.

In 1990 it was the fastest growing airline in the world, and it continues to grow rapidly.

This success has prompted Thai Airways International to seek privatisation through listing on the stock market later this year, and it is predicted it will be one of Thailand's most sought after stocks.

As you can see, Thailand's economic prospects look extremely attractive.

No wonder it's known as the Land of Smiles.

THAILAND 2

Peter Ungphakorn considers whether the country's economic miracle is over

Politics: can the military accept civilian control?

The pessimists and the optimists

ONE OF the two big questions about the Thai economy this year is whether the miracle is over.

In the "pessimistic" blue corner, Dr Chalongsob Sungsakorn, former World Bank economist currently in charge of the independent Thailand Development Research Institute's macroeconomic programme, believes that the double-digit growth rates of the past four years have come to an end.

Thailand will have difficulty continuing to climb up the growth ladder, he says, because the country is not saving enough to meet its investment needs and because the labour force may not be sufficiently educated for some years to take the country on to a higher quality production rung.

In the "optimistic" red corner are the economists at the Bank of Thailand, who say they already see signs of a revival and that the problem of recession, at least, should be soluble. Between them are who predict that Thailand will continue to experience a sort of "recession" all next year. After that, they predict, the economy will boom again.

"Recession" in the Thai economy is a dip in the growth rate of gross domestic product from the 10 per cent of 1990 to the 8 per cent of 1991, government economists predict for this year. It has been brought about by the world economic slowdown and the Gulf crisis. The number of tourists visiting Thailand this year is estimated to be down 10 per cent (an estimate depending on how well the sector recovers in the peak months of just begun).

It has been compounded by February's coup which has foreigners wondering if Thailand is still a safe place to invest in and has cut net direct investment inflows by an estimated 25 per cent.

What has surprised the Bank of Thailand's economists is what appears to be a rapid recovery in the country's export performance in the third quarter of the year, registering growth of 10 per cent.

Economic indicators 1980-90

of 26.8 per cent, despite the barely detectable recoveries in the US and Europe.

Thai exporters with their expertise, adaptability and flexibility - and their relatively small size in comparison to world markets - seem well placed to meet new markets with new products. This is the concern of the central bank's economists, who say the deficit in goods and services is currently running at about Bt27bn or 0.5 per cent of GDP.

Last year the deficit peaked at 8.9 per cent of GDP, causing considerable worry. Next year, there could be a further easing to just under 8 per cent, they say.

This year, along with an estimated 21 per cent rise in merchandise exports for the year, there has been a slowdown in the rise in imports from last year's 20 per cent to about 18 per cent.

Earnings from tourism are expected to be up 16 per cent, at Bt128.5bn, and despite an

estimated 34 per cent drop in the earnings of Thai workers in the Middle East, new arrivals in Thai labour in Taiwan and elsewhere could still raise total remittances by 4 per cent this year, the Bank of Thailand says.

Dr Chalongsob and his colleagues at the Thailand Development Research Institute have yet to crunch the numbers. But he remains unconvinced about some of the Bank of Thailand's optimism.

The key issue, he says, is savings mobilisation. For the seventh national economic and social development plan, which started in five-year period in October, the government wants to increase the proportion of the income they save by one percentage point a year from the present 13 per cent.

If that can be achieved, Dr Chalongsob says, then the current account deficit could improve to 2.5 per cent of GDP in 1991. But if the savings rise only by half a percentage point annually, "which is still optimistic", then the deficit will remain at 7.5 per cent of GDP, according to his calculations.

Then there is the question of whether Thailand's labour force can be adequately trained to reach the sophistication needed for a country being chased by new cheap labour producers, and whether Thailand has a clear picture of where the economy should be heading over the next decade, he says.

This time last year, there was a similar debate between Dr Chalongsob and the Bank of Thailand, with the former in the pessimistic corner. The central bankers were proved right, but only because Dr Chalongsob overestimated the damage to the economy that would be about to be

caused by an event of great uncertainty - the Gulf crisis.

The second big question is macroeconomic management. Traditionally, macroeconomic policy has generally remained cautious, with most governments aiming to balance budgets and avoiding excessive debt. The biggest controversies have been about sectoral issues such as intervention in agricultural trade, and infrastructure projects.

After the February 23 coup, Mr Anand Panyarachun's government set itself the task of trying to lay the foundations for better and more accountable spending of large projects. It set about renegotiating contracts signed by its predecessor, and immediately ran into conflict, ironically with the military, who had cited corruption by the previous government as an important reason for the coup.

One of the government's first moves was to cut the military's first instalment of a 25-year concession in which it had agreed to build and operate 3m new telephone lines. A Canadian journalist, who had just returned to Bangkok after a stint in Yugoslavia and Russia, was asked: "Last year, Chavalit and the military were each other's worst enemies. Now they are each other's best friends. Is this normal in Thai politics?"

A week later Mr Anand Panyarachun, the prime minister, who had been moderate but wary of the critics of the draft constitution, commented in the Financial Times: "Ten years ago, you would not see retired military generals debating vigorously against the present draft or pleading for a fuller form of democracy... They are very forcefully, to me it's a healthy development."

Ten years ago, you would not have seen the military stage a coup and hand over the premiership to a civilian. Now Mr Anand. Only six weeks after his appointment on March 2, he told foreign correspondents in Bangkok that the

IT WAS like the 1970s all over again. Tens of thousands gathered at Sanam Luang, the black square in the middle of Bangkok, last month to protest against the draft constitution that they said would keep the military in political control after the elections promised for next year.

Many of the protesters were familiar, seen in similar circumstances after 250,000 marched through Bangkok and overthrew the military dictatorship in October 1973.

It was about a reunion of old activists. "All we need is Peter, Paul and Mary on stage," joked a political science lecturer, who said the US protest singers had been performed in Bangkok.

But some things were not the same. Making speeches on stage were no longer the preserve of the military. Former army commander, Mr Samak Sundaravej, became minister in the controversial government appointed after the coup that suppressed yet another student protest in October 1976, and Major-General Chamlong Srimuang, a former member of the Young Turk group of officers which staged a number of coups from 1977 to 1985.

A Canadian journalist, who had just returned to Bangkok after a stint in Yugoslavia and Russia, was asked: "Last year, Chavalit and the military were each other's worst enemies. Now they are each other's best friends. Is this normal in Thai politics?"

A week later Mr Anand Panyarachun, the prime minister, who had been moderate but wary of the critics of the draft constitution, commented in the Financial Times: "Ten years ago, you would not see retired military generals debating vigorously against the present draft or pleading for a fuller form of democracy... They are very forcefully, to me it's a healthy development."

Ten years ago, you would not have seen the military stage a coup and hand over the premiership to a civilian. Now Mr Anand. Only six weeks after his appointment on March 2, he told foreign correspondents in Bangkok that the

crux of Thailand's democracy question "is whether the military are prepared to accept civilian control."

Nor, 10 years ago, would you have seen the military back down on point after controversial point in their draft constitution because of public protest.

But the roots of the tension between military and civilian politics in Thailand go back further than 10 years, to the 1973-76 interlude when the country experimented with the most open democratic system it has ever had since absolute monarchy ended in 1932. The traditions of a free press that the military have barely used to curb in 1991 were strengthened in that period. So was the legitimacy of electoral politics, despite many MPs' apparent willingness to tarnish their image by indulging in vote-buying and corruption.

Part of this political development was the rise of the modern business class and the increasing importance of investment in the Thai economy.

The day after the February 23 coup, Gen Suchinda Kraprayoon, army chief and de facto coup leader, acknowledged the necessity of the return to power of the military.

"Soldiers invest in the stock market, too," he said, saying that the confidence of foreign investors would be shaken and share prices would fall. One of the means of allaying the fears of the business community was to appoint Anand and his cabinet of technocratic super-stars.

The coup leaders formed the National Peace-Keeping Council (NPKC) which gave itself the task of re-drawing Thailand's political rules, particularly drafting the constitution. Mr Anand and his ministers have shown an economic management and day-to-day affairs. It was no caretaker government. A stream of new measures, including clamping down on state-enterprise unions, deregulation, privatisation, tax reform and new rules governing public service projects that would improve assessment and accountability.

The allegations of corruption may have been a pretext for the military but they were

important for a large part of public opinion. But the public's willingness to accept the coup did not mean it agreed that the military leaders should take power for themselves. By the autumn, suspicions were growing that Gen Suchinda's supporters were paving the way for him to be prime minister in the election.

A scrutiny committee of the military-appointed legislative assembly proposed amending the constitution to enable a serving government official - to become prime minister without having to resign and stand for election. It also proposed increasing the powers of the senate, which would be appointed by the coup leaders, so as to allow it to hire and fire the prime minister, and approve the budget.

Politicians who had committed themselves to the electoral road to power reacted with fury. At roughly the same time, the Chat Thai Party of the overthrown premier, General Chulachit, picked a new pro-junta leader and moved towards an alliance with a new party set up specifically to back Gen Suchinda. Meanwhile, the NPKC gave 13 leading members of the previous government a better chance of escaping conviction for corruption by allowing them found guilty by a special committee to appeal to the courts. Murmurs of a secret deal were heard.

Last month, the opposition was so strong that General Suchinda had to announce categorically that neither he nor his ministers in arms would be part of the government to be set up after the election. Then followed a series of climb-downs by the legislative assembly on the draft constitution.

But the military remains a force to be reckoned with, and there appears to be little keenness among many politicians to break their old bad habits. Most observers believe that the tensions of the past few years will continue to resurface. Most believe it will have little effect on important matters like making money.

THAILAND

The prime minister is interviewed by Victor Mallet and Peter Ungphakorn

'We can move up the ladder'

Q: How do you see the economy developing? With Thailand facing competition from lower-cost producers, can the country move up a rung on the economic ladder and increase high technology exports?

A: At the beginning of the year there was real concern: first about the overheated economy, then about the inflation rate, and the growing deficits in the current account. If you go back to the 1980-90 decade, the economy grew by something like 90 to 100 per cent, and because of the inadequacy of the infrastructure, because of the abnormally high growth that we maintained, inevitably our economy was getting overheated. So when we came into our jobs we had to deal with issues rather seriously and the economy is now becoming

I think that because of the monetary and fiscal measures that we have taken, we have now begun to see results. Inflation is under control. This year's inflation is expected not to exceed 6 per cent and next year it should be slightly below. The current account deficit is also under control. We are quite confident that it will become stabilised and it will actually start to decrease gradually as of next year.

There is a need indeed for the Thai economy to graduate to a higher level. Many people seem to overlook the fact that while the cheap labour aspect was being emphasised in the foreign investments, the more inherent element of our labour force is its productivity and its adaptability as well. In terms of education, in terms of technical knowledge, or in terms of technical expertise perhaps we can compete with Korea, or Taiwan or Hong Kong or Singapore as yet, but there are many other aspects for which the Thai labour force, and Thai management people are famous, one of which is the entrepreneurial skill of our business class.

In addition to that, I think that our business community in the past decade has been shown to be much more resilient than most other groups in other countries. I often refer to the fact that some seven or eight years ago when there was a global recession and most countries registered negative growth, including Singapore, Thailand registered 10 per cent growth. There are some other aspects that are inherent in our economy - the diversified range of our products, and also the diversified range of our markets.

Q: What do you think is the next step? A: Well, it's going to take a few more years before we can start to lick the industrial productivity of our national, our labour force. There aren't enough engineers, there aren't enough scientists, and there aren't

MR Anand Panyarachun regards his elevation to the post of prime minister after the coup d'état in February this year as an accident of history, but in many ways he epitomises the enigmatic style of Thai politics in 1991.

Fifteen years ago, after the country's bloodiest coup, this former ambassador to the US was removed from his position as permanent secretary of the foreign ministry because the military establishment believed he had communist sympathies.

He had, after all, been a key figure in negotiating the removal of US bases from Thailand after the fall of Saigon in 1975 and in accompanying Thai leaders on ground-breaking visits to Beijing and Hanoi.

A year later, disillusioned, he resigned from government service and joined one of the country's largest business groups, Saha Union. He rose to become group chairman, president of the Federation of

Thai Industries, director of numerous Thai and international companies including IBM (Thailand) and Sime Darby Berhad (Malaysia), and president of the Association of South-East Asian Nations' Chambers of Commerce and Industry.

A product of Dulwich College in London and Trinity College, Cambridge, the cigar-smoking Mr Anand frequently aired his libertarian political and laissez-faire economic views.

This year, when the military seized power in February, they surprised their critics by appointing Mr Anand as prime minister to steer Thailand away from what they argued were the sordid, corrupt practices of the elected government they had overthrown. Some were surprised, too, that he accepted.

This article comprises edited excerpts from Mr Anand's interview, in English, with the Financial Times.

Anand Panyarachun, the prime minister: "We have begun to see results"

enough. But this will come about. The questions are being addressed quite seriously and I think that with the return to normalcy in south-east Asia, particularly in Cambodia and Vietnam, the possibility of Bangkok or Thailand becoming a regional centre for production, distribution, services, a regional centre for the financial sector - that possibility is going to be an additional incentive on the part of Thailand and on the part of

foreign investors to get together and decide to solve these problems.

When the reconstruction or rehabilitation of the economies of Vietnam, Laos and Cambodia - and one day, Burma - takes shape, Thailand could provide some kind of a jumping post, a focal point. Japan can use Thailand as a conduit to transfer their technology, to transfer their expertise, to transfer their factory experience to these countries.

Q: The Thai economy is a well-known success story. Is there associated with that a - environmental and social - which Thais are beginning to think about more and more?

A: I think it's healthy that the Thai people, the Thai government, have themselves become more conscious of the negative aspects of development, and once we've been able to identify those problems we got to put our heart and soul into resolving them. It's not a question of either/or. We are going ahead with all of these regulations which would take care of the environmental impact, negative impact.

Q: Are you still vigorously pursuing the idea of an ASEAN free trade area?

A: Yes, it's going to be adopted at the next summit meeting in Singapore. We hope that by the time we get to Singapore in late January we'll be able to announce two or three sectors which will be implemented right away with a short time frame, perhaps three years, perhaps five years. We are concerned about the need to increase inter-Asian trade, the need to increase inter-Asian investment and the need to attract more foreign investment into the country.

Q: Turning to politics, why did you feel the need to comment on the draft constitution after months of silence? A: When the draft was put out and I had the chance to read it, I found that there were some provisions in it that were rather contentious. And when I was pressed for personal opinions, I thought that my personal observations might help to address a potentially explosive situation. It is the military coup a brief interlude in a process towards fuller democracy as a serious objective.

A: Every now and then there was a hiccup. I do not like hiccups. I had never had any part or any role to play in them. But when you had hiccups, then it's the responsibility of the entire nation to try to get back to normalcy and this is what the government has done, what our government has done. And I think the truth is that the Thai people themselves still do not understand fully what democracy is all about, so it takes time for these people to grasp the fundamentals.

Respectful of the steps that we had in the past and whatever we may have in the future - and I forbid, I hope there will not be another one - you cannot deny the fact that we have been moving forward, perhaps not at a pace that I would be personally satisfied, but we have moved forward. Ten years ago you would see the military military government debating vigorously about the very concept of or pleading for a fuller form of democracy. This is quite an important change. We have to muddle our way through.

EXISTING industrial investors in Thailand are not exactly pausing for breath, but the inadequacy of the country's infrastructure, a shortage of skilled labour and the political confusion after the February coup d'état are all contributing to a substantial fall in new domestic and foreign investment.

Although projects ranging from a hair brush factory to electronics plants continue to receive incentives and to come on stream at a satisfactory rate, figures from the Board of Investment (BoI) show dramatic falls in the number and value of new applications for investment privileges. Project applications, for example, fell to 531 in the first 10 months of this year, compared to 876 in the same period of 1990, 1,200 in the whole of 1989 and 2,100 in 1988.

"Investment in 1991 has slowed down," says Mr Stapan Kavitaanon, BoI secretary-general. It is a secret, he says, that Bangkok's transport and communications systems are overloaded or that some potential investors were discouraged by the coup. "I began to say that we lost for the first two quarters, but it seems that investors are now coming back," he says.

Part of the investment slowdown is the natural result of saturation. Booms in hotel-building and rubber glove factories, for example, have come to an end. Having successfully managed the transition from import substitution to the promotion of export industries, the BoI is again faced with the need to adjust its role, as Thailand attempts to increase its technology exports and abandon some of its labour-intensive industries to cheaper competitors.

Without forgetting agro-industry, the BoI wants to encourage the manufacture of components for vehicles and electronic items to complement assembly operations. "We will position ourselves to produce the intermediate technology range," says Mr Stapan. It is widely accepted locally and outside the BoI that the organisation needs to move from general encouragement of investment through incentives to a more focused use of its powers in achieving particular objectives.

To spread investment and reduce the pressures on Bangkok, for instance, the BoI has divided the country into zones which enjoy different incentives: Bangkok and its environs, the 10 central provinces around the capital, and

INVESTMENT

The focus switches to technology

Net foreign direct investment

the rest of the country (including the Eastern Seaboard Development Programme).

"Labour-intensive and low-tech industries - these are things I don't think we can put around Bangkok any longer," says Mr Stapan. "In this central area we are looking for high-tech products. But it's extremely difficult to persuade foreign companies to set up factories. Last month, the BoI decided to increase incentives - including tax breaks and the easing of foreign shareholding limits - for investments in the rest of the country.

At the same time Thailand and the rest are trying to position themselves as a bridge between foreign investors and Japan, Taiwan and elsewhere and the emerging economies of Indochina. "We have the advantage of knowing these countries and having some access," says Mr Stapan. Thai investors have already begun to move into Cambodia, Vietnam and Laos. Siam Commercial Bank, for example, has opened a joint venture operation with the Cambodian national bank. "We believe that Indochina will be an extension of our own domestic economy," says a senior official of Siam Commercial Bank. "It's natural that we should be the springboard to Indochina."

Victor Mallet

OUR LONG TRADITION IN THAILAND IS A POINT IN YOUR FAVOUR.

If you're doing business in Thailand, you should know about a bank that has been helping Asia and the world do business there since 1888. In fact, HongkongBank was Thailand's commercial bank; we even owned the country's first banknotes.

Generations of experience have given us extensive knowledge of Thailand's market, as well as insight into the economy of this exciting, progressive nation.

As the principal member of the HSBC Group, HongkongBank has the support of the Group's 1,300 offices worldwide, including over 100 in Asia. All linked by advanced telecommunications systems.

To find out more, contact our Bangkok office at HongkongBank Building, 24 Silom Road, Bangkok 10500, Tel: (2) 233-1904; our London office at 99 Bishopsgate, London EC2P 2LA, Tel: (071) 638-2366; or your nearest HongkongBank office.

And take advantage of our unique touch in Thailand.

THAILAND 4

THE STOCK MARKET

Curbs on a casino

THE RAPID expansion of the Exchange of Thailand since its foundation in 1975 has not been without growing pains. In 1991, with the index dawdling in the bearish 600s (compared with a peak of 1,144 before the Iraqi invasion of Kuwait last year) many participants in this volatile market regard it as a thing of a casino. The excitement is palpable as the public enters the brokers' galleries between 9am and noon like punters in a betting shop.

Such places, described by one broker as "a cross between Wall Street and Hill Street", have obvious dangers and obvious advantages for the market. Brokers complain of wildly inaccurate profit forecasts by companies seeking a listing, and about unofficial bets on the index which cause sudden fluctuations in the price of major components such as Siam Cement in the final minutes before the day's close.

But the SET is always in the enthusiastic about equities. Many Thai investors are concentrated on trading volatile finance and securities stocks which depend partly on the volume of SET trading - a lot of leveraged money on the market - and foreigners

happy to put their money into safer investments in an environment still growing at 6 to 8 per cent a year.

As it becomes a larger part of the economy and a leading indicator in its own right, the stock market does what it is meant to do. "It stimulates savings and channels them into investment," says one broker in Bangkok. "It's probably made it easier for the medium-sized companies to raise money from the larger commercial banks."

With 40 companies now taking part in more than 250 companies quoted on the SET, the Thai authorities are working on several fronts to improve regulation, expand the range of quoted instruments and bring sober domestic institutional investors into play alongside the speculators.

A Securities and Exchange Commission law is being prepared, and it is hoped that it will come into force next year. The SEC or Securities Investment Board - the name has yet been decided - would

Corporate securities

Turnover (Baht billion)

Source: The Stock Exchange of Thailand

supervise the primary and secondary markets. "The Stock Exchange will be in full operation and development," says Dr Maruey Phadungsith, the outgoing SET president. "The regulatory body will be established in the new body. Wrongdoing - price manipulation and insider trading - will be taken care of efficiently."

This year the SET intro-

duced a computerised trading system which automatically matches buyers and sellers. In the present bear market only about a quarter of the capacity of 130,000 trades an hour is being used, but capacity will expand to 200,000 by mid-1992 to meet the upsurge.

Foreign investors have been less active in the Bangkok market since the crash which followed Iraq's invasion of Kuwait - the SET says foreign share of volume has fallen to 5.7 per cent from around 17 per cent - but the exchange remains relatively open to foreigners and the index could rise dramatically if political stability seems assured and interest rates fall further as the real economy slows.

"There comes a point when people start to invest again," says one Bangkok broker, "and away we go to the races again."

Victor Mullen

Peter Ungphakorn on trade relations

Pressure from US

FOR six years now, the dominant force in Thailand's international trade relations has been conflict with the US. In 1983, US pressure on Thailand to pass a controversial copyright law contributed to the downfall of the government of Gen Prem Tinsulanonda. This year, the issue has been pharmaceutical patents, arousing equally heated debate.

Thai and American diplomats tend to attribute these disputes to a "maturing" relationship between Thailand and the country that buys 30 per cent of its exports, a percentage that has almost doubled in the past decade.

In fact, the diplomatic tensions are the result of complex changes in the world climate that are having repercussions on Thailand. The main area of contention now is intellectual property software, trademarks and pharmaceutical patents. The principal means of exercising American pressure is the threat of retaliation against Thailand under Section 301 of US trade legislation, originally designed to tackle "unfair trading practices in Japan and the East Asian tigers."

The pressure has forced Thailand to place a greater emphasis on the international rules of the General Agreement on Tariffs and Trade (GATT). Thailand has been active in the Uruguay Round of multilateral trade negotiations as a member of the Cairns Group of agricultural exporters, who seek free trade liberalisation, and through its alliance with textile exporters demanding the phase-out of quotas under the Multifibre Arrangements.

Thailand wants a successful conclusion to the Uruguay Round in the hope that a strengthened GATT will ward off Section 301.

While the Americans argue that Thailand trades unfairly by allowing product piracy, the Thais accuse the US of double standards. Washington has refused all along to make significant changes to its rice subsidy programmes until agreement is reached on agriculture in the Uruguay Round. At the same time, the US has rejected Thailand's arguments for tightening intellectual property protection should wait for

Structure of exports

new GATT rules to be agreed. This year, there is a difference in Bangkok, however. The government of Mr Anand Panyarachun has been clear in its support for liberalised trade, and has argued, unusually, that Thailand is itself too protectionist for its own good.

In July import duties were slashed on cars and car parts, and this was followed by similar cuts for computers, components and peripherals. When pork prices rose, Mr Anand

Sila-On, the commerce minister, allowed imports from Malaysia, a previously unheard-of measure.

Mr Anand and Mr Anaret also argue that Thailand's policies have to reflect a growing maturity and responsibility in its economic relationship with its trading partners. Tightening up intellectual property rights would play an important part, they say.

The question of pharmaceutical patents in Thailand is not the same as other intellectual property rights issues. Copied drugs are not sold on street-side stalls in tourist haunts alongside counterfeit watches and designer-label clothes or illicitly duplicated films and music.

They are legally approved by the Thai Food and Drug Administration.

Since 1989, when the US signed the Berne Convention and automatically brought its creations under Thai copyright law, the main problem with copyrights and trademarks has been enforcement, although penalties under the Thai trade laws were increased this year.

Pharmaceuticals, on the other hand, have been exempt from patent law in Thailand, as they were until recently in several developed countries, most notably Canada. Health workers who oppose pharmaceutical patents argue that these would lead to exploitation by the multinationals, raising the cost of health care in a poor country. However, the industry argues it loses \$24m a year from drug copying in Thailand.

The Thai government agrees that drugs will have to be patented and the Americans accept that drugs already on sale legally in Thailand need not be patented. The main differences between Bangkok and Washington are about technical details.

A proposed grace period between the law's enactment and enforcement, like criteria the Thai government can use for "compulsory licensing" - in force since 1987 - to issue licences to break over-pricing or abuses of monopoly power, whether any backdating will be allowed for drugs whose patents have been applied for in other countries but have not been dealt within Thailand at the time the new law is passed.

The government tried to rush a bill through last month, but because of the controversy, the normally acquiescent legislative assembly asked for more time to consider the implications. The Americans, meanwhile, are warning that time is running out.

Exporters of gems, jewellery, garments and other textiles products threatened with retaliation are growing increasingly nervous.

AGRICULTURE

Conflict over resources

THAI AGRICULTURE is becoming increasingly characterised by conflict over resources: land, labour, capital, technology and even water. It is also becoming more diverse, both in its range of products and in the level and sophistication of production.

One of the principal questions being asked is whether the government can adapt to the rapidly changing world.

In the manufacturing overtook agriculture both in terms of export performance and share of gross domestic product. But in many ways agriculture remains the most important sector, employing close to two-thirds of the labour force.

Thailand is the world's largest exporter of rice (6.14m tonnes in 1989, down from 6.14m in 1988), tapioca (about 10m tonnes in 1989, 8m in 1990) and canned tuna - although much of the tuna is itself imported - and the third largest exporter of prawns and rubber. Its fishing fleet ranks among the top 10 in the world.

Farmers are also turning to fruit, vegetables and livestock. Milk production in 1990 was 1.1m tonnes, up from 1.0m in 1989.

per hectare in 1989 to 130,278 tonnes. In addition, agricultural products supply a growing agro-industrial sector, which is statistically categorised as manufacturing.

The rural sector is still dominated by small farms, but the gaps are widening. Among the poorest are farmers settling on land officially designated as forest reserves. The government and private companies have property rights for these farmers in an example of the tensions of adjustment.

At a recent conference in Bangkok, Thai officials tried to explain to some of the world's leading agricultural experts a key difficulty the government faces when dealing with forest settlers.

"Who owns the land?" a senior European official asked. The Thai replied: "The government thinks it does, but the farmers don't. The farmers think the land is a wilderness

belonging to no-one even though it may already have been partially logged through state-granted logging concessions. Illegal logging by private companies operating outside their official concessions."

They claimed, the land is bought and sold, without official title, but with official documents such as land-use permits. The state seems to recognise the farmers' possession of the land, but not ownership. The foreign diplomats were not sure they understood.

Settlers still operate under the traditional of local property rights dating from when unclaimed land was plentiful and the state's authority did not reach remote areas. Now they are squeezed between, on the one hand, government agencies increasingly determined to keep them out of official reserve land, and, on the other, population growth

fuelled by the recent surge in capital that encourages them to sell and move further into the land that was once forest.

Conservation has become a serious issue, although the settlers may have played only a small part in the deforestation that halved Thailand's forests in the last 30 years to an estimated 14m hectares, out of a total land area of 57m hectares.

In some areas the conflict has become violent, and an argument is raging about whether it would be better to give the locals full title to the land so that they are encouraged to look after it and the surrounding forest, or whether this would simply attract more deforestation. Farmers facing eviction point to the big businesses - eucalyptus and other monocrop plantations, resorts and golf courses - that have mysteriously gained possession of reserve land.

Real estate speculation fuelled by the recent surge in capital that encourages them to sell and move further into the land that was once forest.

THAILAND

The Business Base in South-East Asia

Standard Chartered

"With over 100 years experience in the Kingdom, we are well positioned to assist with future growth as Thailand emerges as a regional financial center and a gateway to Indochina."

Roger Spyer, Country Manager, Standard Chartered Bank Thailand

N M B MINEBEA

"MINEBEA is fully committed to Thailand's industrialization drive. Much of our engineering and R&D efforts are focussed on our Thai operations."

M. Iijima, General Manager, NMB Thai Ltd.

VOLVO

"Volvo has enjoyed terrific growth in Thailand, Southeast Asia's largest and most dynamic automotive market. In the 1990s, Thailand will play a major role in our Southeast Asia complementation scheme."

Jan Eriksson, Managing Director, Volvo Thailand Ltd.

CARGILL

"Cargill has achieved steady growth in Thailand's agro-industry over the past quarter of a century. Our successful base in Thailand will be a major advantage as we prepare to enter new markets in Indochina."

Martin Dudley, Chairman, Cargill Ltd.

Ahead of Maastricht, Ian Davidson, left, and Martin Wolf debate the desirability of closer EC union

New era for EC family

Despite the melodramatic posturing of the top negotiators in advance of next week's Maastricht summit, it is virtually certain that they will get an agreement. Indeed, so many conciliatory gestures are already being made, that some people think this could be a milk-and-water deal without dramatic consequences.

Do not be deceived. Whatever the last-minute compromises, the Treaty of Maastricht will be the biggest event in the history of western Europe since the foundation of the Coal and Steel Community over 40 years ago. If this is not properly perceived in Britain, then that is partly because of the way the issues have been presented by the UK government.

The European Community owes nothing to Britain: it has come, this far only because political leaders on the continent have wanted it to. Successive British governments have consistently tried to prevent or escape the trend towards greater European integration; 40 years on, the government of Mr John Major is still running true to that form.

President Mitterrand tells the French that he wants the European Union to become a federation and the greatest power on earth; Chancellor Helmut Kohl tells the Germans that he must have political union. But Mr Major advertises his instinctive suspicion of the whole affair: he is determined not to be left out but he will do his best to limit the damage.

Next week's treaty will launch the 12 into several colossal, important new areas, starting with economic and monetary union, and foreign, security and defence policy. But almost as significant as the adoption of these specific domains is the fact that almost any policy area can now be discussed as a candidate for European competence.

Take, for example, the question of immigration. Most member states (though not, of course, Britain) accept that the Single European Act, which calls for the free movement of people inside the Community and the dismantling of internal

frontiers, means what it says, and that there must be a common set of rules for treating people at the Community's external frontiers.

The German government, which is struggling to cope with large numbers of immigrants from eastern Europe and elsewhere, further argues that the Community should become responsible for Europe's immigration policy. Even if the German proposal is excessive, it cannot be dismissed out of hand. Immigrant pressure on western Europe is vast and rising. If the 11 are to have any real hope of containing immigrant-fueled, they will need three sets of co-ordinated policies: first for excluding unwanted immigrants, second for socially integrating those who cannot be excluded, third for developing the economies and reforming the societies of the countries exporting immigrants. Only the British government thinks its interests are satisfied by posting extra policemen at the Channel Tunnel.

The British may crow that they have kept social policy out of the realm of majority voting, but theirs will be a hollow victory, and any such illusion will be shattered when the treaty is signed. The underlying lesson, first of the single market, and now of economic and monetary union, is that the areas of economic or social policy where there can be a neat dividing line between national interest

From now on almost anything may legitimately be considered of common interest

and Community interest.

The anti-federalists think they have won a victory in the negotiations, by ensuring that the Maastricht treaty is split into structurally separate parts. Some things, such as immigration, will be handled by the Community's ordinary institutions; other things, such as foreign policy and internal security, will be handled on an

inter-governmental basis.

This institutional distinction seems to imply that on inter-governmental issues member states will be free to decide whether to co-operate with their partners or not. This victory will prove as illusory as previous attempts to circumvent the Community process. Foreign policy will be an inter-governmental affair. Does that mean Britain can have an independent policy towards Russia? The idea is ridiculous.

In short, the Community is moving from an era of narrowly defined and self-contained commercial bargains, to an era of potentially unlimited overlapping common interests; from the era of the market in that of the family. This does not mean that everything will be decided by the family, but from now on almost anything may legitimately be considered of common interest, and that is the real meaning of the treaty.

The functioning of democracy in EC member states may become a common concern. The general notion of federalism is that the transfer of power to the Community institutions opens up a "democratic deficit", which requires a strengthening of the European Parliament.

It is not obvious, at this primitive stage of European integration, that an unfettered open European Parliament can bear the full weight of making good the democratic deficit. The member states will continue, for decades or perhaps

centuries, to provide the essential political structures for EC action, and it is these national institutions which will have to bear the main stresses of integration. And it is not clear that the political institutions in some member states are up to the job.

Some may ask whether we need to suffer the political stresses implied by next week's treaty at all. The answer to this question is written on the map of Europe. When Mr French first proposed the creation of a Community in 1950, their primary aim was to bring to an end 100 years of war in western Europe. Today that purpose has been so thoroughly accomplished that the military alliance between France and Germany seems obsolete.

In the meantime, however, the disintegration of the rest of the continent has made the need for political integration in western Europe stronger than ever. The liberated economies to the east will depend crucially on the political and economic stability of an institutionally organised western Europe. And in the east, the Soviet Union, western Europe has little option but to develop the means of its own defence.

The difficulty of those tasks need no restating. But anyone who believes that they can be satisfactorily handled by a loose congeries of independent European states has not measured the scale of the problem.

Federalism before a fall

Forget, for a moment, the missed trains, the two speeds and other Euro-cliches. Ignore suggestions that the new European treaties will make little difference. Forsake, too, those who suggest one can dine à la carte: monetary union, a supposé of economic union, but no political union. Only two opinions are seriously held by the federalists and those of their irreconcilable opponents. The opposites agree where agreement is impossible. These treaties matter because they will shift the balance between two visions of the European Community.

The first vision is that of a constitutionally entrenched liberal order. Europeans have good reason to be grateful for the prosperity and harmony brought them by the EC in this benevolent guise. Yet the EC has a dark side: harmonisation and collective management of day-to-day policies. It is not sufficient, people say, for the EC to be a common market; it must be a state. The Common Agricultural Policy is a prime example of the EC's actions in the latter guise.

Some argue that monetary union is a constraint on governments, like the last century gold standard. So it is. But that is not all it is. Monetary union allows from the gold standard in five salient respects:

● The last standard was, like the weather, beyond praise or blame. The proposed monetary union, by contrast, will see discretionary control over monetary policy.

● Under the gold standard, the world's irresponsibility fell on the guilty state, which could be blamed of gold. Under a monetary union, it falls on all members of the union.

● Under the gold standard, a country could choose to go off gold. Under monetary union, return to a national currency would amount to secession.

● In the era of the gold standard, governments were held responsible for the economic fortunes of their nations. But Europe is the home of the world's most welfare-oriented states, with "cohesion", "solidarity" and "social protection" as its banners.

contains the industrial world's most inflexible labour markets. As a result of these differences, economic and monetary union means that:

● the fiscal policies of individual member states would come under Community guidance; attempts would ultimately be made to make a collectively agreed EC fiscal stance; fiscal transfers among member states would be demanded and, in the end, granted; and finally, the impossibility of achieving desired objectives through fiscal policies controlled by member states would lead to direct EC taxation.

In time, EMU would turn the EC into a state. It is not that a minimum government version of EMU is logically inconceivable. But it could only survive, in practice, if income taxes and adjustments in economic change were to occur through the market. Given the nature of the EC's labour market, the need for intrusive power would be greater than in the US. Meanwhile, the EC's dirigiste ambitions for the labour market are bound to make already bad labour markets worse.

Those who wish to destroy the EC first wish to destroy the EC's ability to adjust through the market. If autonomous adjustment through the market is diminished, the stronger becomes the case for common policies, funded by common resources. He wonders then that a commonality of labour between the Commission, known in rich states like France to limit the competitiveness of poor ones, and to prevent in poor states that such resources from rich ones has created a treaty on political union which, like a Christmas tree, has a bauble for everyone.

Why should Germans welcome a replacement for the D-Mark that is likely to be worse?

EC responsibilities for the treaty on political union are the EC's bulwark of "solidarity": the "Community shall take action... only if, and insofar as, the objectives can be better achieved by the Community than by the member states acting separately". What, one might ask, does "better" mean; and who will

To the often heard argument that the issue is not the powers left with member states, but liberalism, the reply is simple: member states are guarantors of liberalism. Within the single market, member states are subject to fierce regulatory competition. It is the resulting pressure for liberalisation that the introduction of "minimum standards" by qualified majority voting is intended to thwart.

In short, the EC is a table at Maastricht represent a choice. The EC is to become a state. More, it is to be a multinational, multinational, federal superpower, one with inadequate constitutional safeguards, dominated by largely unaccountable institutions and an elected parliament counterweight as a state. It is this thought does not give the proponents pause, it is difficult to imagine what might, for the auguries are inauspicious.

Neither the USSR nor the US suggests that this exalted status is conducive to happiness. Small trading powers obliged to compete in world markets run risks around which the world is looking. Even a common currency, the one clear economic benefit of the treaty on offer, is far from an essential ingredient in economic progress. Will the EC's monetary union outweigh the loss of flexibility attendant upon a single currency?

Protagonists of these treaties also stress the importance of eliminating conflict among the states of Europe. But will these treaties diminish conflicts, or increase them? Why should Germany welcome a replacement for the D-Mark that is likely to be worse? Why should Europeans acquiesce in the deflationary policies of a European super-bank? Why should the smaller states be happy with policies that are most unlikely to apply to the big ones?

Perhaps future historians will see Maastricht as a decisive step towards the creation of a stable, European power. Yet there is another, darker possibility. This may be when a state's assault on the arbitrary powers of the European Community is buried within a one. The effort to bind states together may lead, instead, to a huge increase in frictions among them. If so, the event would meet the classical definition of tragedy: hubris (arrogance), ate (folly); nemesis (destruction).

LETTERS

Arrogance that ruined an aviation dream

From Mr D M Callow.

Sir, I enjoyed Nikki Tate's report on the demise of Pan Am ("Decline and fall of an American dream", November 23) as an interesting story of the adventure, growth and decline of a pioneering spirit. However, the real reason for Pan Am's significant decline was not mentioned. All other airlines had to cope at various stages of the cycle with stagnating passenger demand and big aircraft replacement costs. Pan Am's failure, in my experience, was due to the arrogant behaviour towards, and almost total lack of regard for, the fare-paying customers. I speak as one who made his first transatlantic trip with Pan Am some 20 years ago. I had the misfortune to experience, when living in Germany in the 1970s, its abuse of the then monopoly position on some internal flights from West Germany to West Berlin.

Probably like many others who experienced its treatment of passengers I vowed at the time never to fly willingly with Pan Am but only to use it as a last resort if no other mode of transport was available.

Perhaps passenger power has played its part in the failure of the company to survive, since it seemed incapable of giving good service. D M Callow, *Traxide House, 137-143 Hammersmith Road, London W14 9QL*

The threat to UK manufacturing if exporters lack government support

From Mr David W Moleshead.

Sir, In addition to the British banks, the foreign banks in the UK also play their part in supporting UK exporters in overseas project business. Therefore, as part of the UK banking community which is in a good position to compare how other countries support their exporters, we should like to endorse many of the comments contained in David Dodwell's article, "Chorus of Complaint", (November 29).

UK exporters need the assistance of the UK government through the Export Credits Guarantee Department to be competitive with their counterparts which in most cases already enjoy a more responsible level of inherent government support in return for lower premiums. Naturally, UK exporters have taken action to establish European links post-1992. This is because it will increase their potential opportunity to procure from other markets where the export credit agencies take a more aggressive stance to support their exporters.

However, such decisions to direct manufacture sourcing away from the UK will be determined, *inter alia*, by the extent and cost of support from ECSD and also by the attitude of overseas buyers who are fully aware already of what is available from other European countries. The ultimate effect will be further erosion of Britain's manufacturing base

and the consequent impact on downstream supporting activities.

It is a fallacy to believe that the UK, by unilateral action, can create an even playing field. It cannot impose upon the political will of other industrial countries if they seek to support exporters through medium-term credit support cover at low premium levels. By all means introduce systems and disciplines within ECSD to react to market sensitivities, but implement the effects with a degree of commercial realism from

an exporter's viewpoint.

We are committed to ensure that exporters sourcing out of the UK remain competitive in pursuing overseas projects, but export credit support on a realistic basis is a prerequisite to ensure that financing schemes available to buyers can be used as an effective marketing tool. This can be provided only with full and competitive government support. David W Moleshead, *Foreign Banks and Securities Houses Association, 5 Laurence Pountney Lane, London EC4*

B&Q import replacement in the spirit of the Treaty of Rome?

From Mr James O'Neill.

Sir, The deputy chairman and chief executive of B&Q states (Letters, November 30) that his best bet is that the Treaty of Rome has superseded the Shops Act 1950; the reasoning behind that premise being, of course, that the restrictions on Sunday trading imposed by the Act infringe Article 30 of the Treaty in so far as the free movement of goods within the Community is affected by B&Q's stores being unable to sell certain goods on Sundays. Is that argument merely, as some would claim, a cynical attempt to gain a further 16 months' trading pending a ruling by the European Court, or is it the expression of a genuine

desire to ensure observance of the principle of freedom of movement laid down in the treaty? Surely it must be the latter. But here is that to be reconciled with B&Q's "750m challenge to British industry" (advertisement, FT November 28), aimed at finding British products to replace the 5,000 product lines valued at that amount which B&Q currently imports.

James O'Neill, *2 Salisbury Street, Gateshead*

Claims that should not be part of the insurance business of Lloyd's

From Mr John Burrows.

Sir, Losses arising from exceptional storm, subsidence, earthquake, marine and aviation disasters in recent years are accepted by Members of Lloyd's because they know that in the term profitable years should comfortably exceed loss-making ones. This is the basis for acceptance of insurance underwriting risk.

Now these losses are being compounded by liability claims, and provision for asbestos, asbestos removal and environmental pollution, from the US, which could not have been envisaged at the inception of the insurance contracts. Much of this loss arises on

open years of old contracts which have still not been closed after 10 years, because reinsurance cannot be reasonably for risks that cannot be assessed, making it impossible to determine liability and consequently a premium.

Asbestosis, which apparently is affecting the population as a whole in the US, seems to be ongoing and continuous. This disease is claimed in the US to be caused by "bodily injury" from "bodily injury" through the inhalation and ingestion of asbestos fibres.

Asbestos property damage arises from the use of asbestos in buildings, much of which is contained or inert, and there-

fore cannot be a danger to health until it is disturbed.

Environmental pollution is caused by deliberate, not fortuitous, dumping which government has not been able to clear.

On joining Lloyd's it was understood that such matters were outside the scope of insurance. They do not accord with the universally accepted principles and practice of insurance.

We learned when we started that we could resign from Lloyd's at the end of a year and our liability then ceased, once the accountancy to that time was resolved.

Now, because of open years which continue and grow, we cannot obtain that release and must take up estate protection policies to prevent our heirs inheriting such losses.

We are content to meet properly incurred insurance losses, but not the "social needs" of the US. Many of us are prepared to go and stand trial there to defend this since such claims are surely not part of our underwriting insurance business at Lloyd's, and we cannot meet them.

John Burrows, *Copyhold, Church Lane, Bury, Pulborough, West Sussex*

INTERNATIONAL COMPANIES AND FINANCE

Building groups in partial merger to fight recession

By Andrew Taylor, Construction Correspondent, in London

TARMAC and Steetley, two of Britain's biggest building materials companies, are to merge their brick, clay roof tile and concrete products operations to combat the recession in the UK construction industry.

The joint venture, Allied Building Materials, to be owned equally by Tarmac and Steetley, would have generated combined pre-tax profits of £22.7m (\$40m) in 1990.

Tarmac, however, has long wanted to expand its UK brick business, which is only slightly more than half the size of that of its joint venture partner. Steetley, for its part, will welcome a £30m injection which, with a revaluation of its mineral reserves, should reduce gearing from more than 60 per cent to less than 50 per cent.

The company will also be vulnerable to takeover. Speculation that

between three and six of the 24 brick plants they own could close. The brick division was expected to provide more than half the annual savings of £10m the joint venture is seeking to generate from rationalisation and improved efficiency.

Mr Richard Miles, Steetley's managing director, said the capacity in the UK brick industry was about 25 per cent and other manufacturers would need to reduce manufacturing capacity.

Tarmac, however, has long wanted to expand its UK brick business, which is only slightly more than half the size of that of its joint venture partner.

Steetley, for its part, will welcome a £30m injection which, with a revaluation of its mineral reserves, should reduce gearing from more than 60 per cent to less than 50 per cent.

The company will also be vulnerable to takeover. Speculation that

Steetley might be the subject of a bid arose after the company announced a 73 per cent fall in pre-tax profits from £49.2m to £13.5m during the six months to the end of June.

Tarmac's share price on the London Stock Exchange yesterday fell 2p to 127p following a warning that its UK housing results this year would be worse than expected. Steetley's share price was unchanged at 269p.

Mr Miles said Allied Building Materials would have net assets of £300m. It would be established debt-free but with the authority to raise borrowings of £50m, of which £30m would be paid to Steetley.

Allied will be Britain's second-largest brick company and the largest producer of clay roof tiles and concrete building products mainly for housing but also for commercial construction.

NH Geotech faces further heavy job cuts

N. H. GEOTECH, formed in May from the merger of Fiat Ford's agricultural and construction equipment activities, may be forced to make heavy job cuts because of the downturn in the farm equipment industry.

The UK-based company, 80 per cent owned by Fiat and 20 per cent by Ford, has already cut about 4,700 jobs.

N. H. Geotech has reduced employment across the board, in the UK, US, Brazil, Belgium and Italy, but the process has not been random. Mr Vincenzo Morelli, executive vice-president stressed.

It is linked to specialisation across the company's manufacturing plants. This is a crucial part of N. H. Geotech's strategy of becoming stronger through behind-the-scenes rationalisation rather than merging long-established dealer networks.

In the UK, 650 jobs are going at Ford New Holland's Basildon plant.

Skis Rossignol back in black at half-year

By Alice Rawthorn in Paris

SKIS ROSSIGNOL, a leading player in the ski equipment industry, returned to the black in the first half of this year, with net profits of FF840,000 (\$128,700) compared with FF11.97m in the period of 1990.

The company, which was announced an increase in turnover to FF762.7m against FF711.06m for the six months to September 30, benefited from the contribution from Roger Cleveland, the golfing products company it acquired last year.

Rossignol was also aided by buoyant demand for its ski products from Japan and Europe.

The company said it expected improvement in the second half of the year. It is on course for a further increase in sales, and also for profits of an estimated FF100m in the full financial year. This should help to com-

pensate for losses of FF140m last year.

The group, which produces tennis equipment as well as skiing products, has been cutting costs after last year's financial difficulties. The benefits of cost-cutting are expected to strengthen its performance this year.

However, the first-half figures include exceptional costs of at least FF15m for the closure of a factory.

Celastose, the surviving French manufacturer of disposable nappies, recently announced it was in takeover talks, refused to comment on reports that it was about to be acquired by Giffels, a Columbian industrial group, for around FF115m.

The sale of 5.78m shares in French oil firm Elf Aquitaine, will go ahead on December 10, as planned, only if market conditions permit. Elf's holding company said yesterday.

against the background of a western European truck (above 6 tonnes) market, excluding former East Germany, that declined by 5 per cent to 270,000. While the truck-makers' workforces from Spain to Sweden are being cut back, painfully, the German truck-producer raised the number of its employees in 1990-91 by 4,467 to 27,886. (Some 2,700 of these are accounted for by the acquisition of the Steyr truck

operations in Austria).

MAN is a medium-sized truck-manufacturer overshadowed by the premier league players of Europe, Volvo/Renault, the Swedish-Iveco alliance formed last year, Daimler-Benz of Germany and Iveco of Italy.

It lacks the financial muscle of the big international companies. For the moment, however, this is a godsend, as Volvo, Mercedes-Benz and Ren-

aud turned up their North American operations.

Within Europe, MAN is over-dependent on Germany - where it controls 20 per cent of the market - and weak in many other markets.

MAN failed last year to broaden its European base through the takeover of Enasa, the Spanish state-owned truck-maker. That failure, too, has been a short-term bonus, however, as Iveco, which won the deal, is now having to shoulder Enasa's spiralling losses.

MAN's performance illustrates the polarisation in demand throughout the western European automotive industry in the last 12 months.

While demand across much of the continent for cars and commercial vehicles has slumped - and most sharply for all for heavy trucks - sales in Germany have jumped to record levels, fuelled by the process of reunification.

Even excluding the one-off addition of the Steyr operations, MAN lifted its new orders in 1990-91 by 41 per cent, or DM2.4bn. Without Steyr, its turnover rose by DM1.1bn, or 20 per cent, and vehicle output by 7 per cent to 36,000.

Boosted by its strong presence in Germany, MAN boosted its share of the western European truck market in 1990-91 to 11 per cent (including eastern Germany) from 10 per cent (excluding eastern Germany) a year earlier.

"We more than compensated for the decline in exports through higher domestic sales," says Mr Wilfried Lochte, MAN Nutzfahrzeuge management board chairman.

In the 1991 calendar year, the company expects to boost output to 40,500 from 36,212 in 1990.

Leaving the competition by the roadside

German unification has lifted MAN's truck business to new heights, writes Kevin Done

MAN Nutzfahrzeuge, the German truck-maker, is powering through the recession in the western European truck industry, while most of its rivals report plunging profits or are already deep in loss.

In the year to the end of June, the company turned in a record financial performance. The unprecedented imbalance of automotive demand in western Europe in the past 18 months - with sales in Germany at record levels while several other markets, most notably the UK, are mired in recession - means MAN's weaknesses suddenly become its strengths.

DAF, the Dutch truck-maker, is a red ink; Volvo Truck's profits have plummeted; Renault Vehicules Industriels of France barely broke even in the first half under the pressure of heavy losses in the US; while Iveco, the commercial vehicles subsidiary of Fiat of Italy, has seen its profits evaporate, in part because of the heavy losses of Enasa, its recent Spanish acquisition.

In the middle of such gloom, MAN Nutzfahrzeuge, the commercial vehicles subsidiary of MAN, the German engineering group, raised turnover in its financial year to the end of June by 33.5 per cent, to DM7.26bn (\$4.59bn), with a 41.3 per cent jump in domestic turnover to DM4.19bn.

The value of new orders booked in 1990-91 jumped 62.3 per cent to DM2.05bn - domestic orders alone by DM2.4bn, or nearly 70 per cent.

MAN truck and bus production rose 11 per cent to 38,200,

against the background of a western European truck (above 6 tonnes) market, excluding former East Germany, that declined by 5 per cent to 270,000. While the truck-makers' workforces from Spain to Sweden are being cut back, painfully, the German truck-producer raised the number of its employees in 1990-91 by 4,467 to 27,886. (Some 2,700 of these are accounted for by the acquisition of the Steyr truck

operations in Austria).

Risk surrounds almost everything worth having.

Maybe you're building cars. Maybe you're building buildings. Between you and your corporate goals lies a complex set of risks.

Manage the risk, and you'll prosper. Ignore it, and you won't. Managing a business is almost wholly a matter of managing risk.

Here, Bankers Trust can help. Our whole enterprise is dedicated to helping clients shed risk that can hurt them. And assume risk by which they can profit.

We're not just talking traditional risk: currency,

interest rates, commodity prices.

But if your market share is menaced by imports, we'll help you neutralise that threat. If your pension funds are lagging their liabilities, we'll help you fix that, too.

Surprised? Don't be. Our unique strength is managing virtually every type of global risk.

So go for the things worth having. Bankers Trust can help put them well within your grasp.

Bankers Trust
LEAD FROM STRENGTH.

RANK XEROX

We made it
99.99966% perfect.
For 50% less money.
In 80% less time.

Any questions?

You probably have a few. We certainly did. Because the situation one of our best clients presented to us was one you might find familiar. The case was as dramatic as it was simple.

Motorola announced to all its suppliers that it was going to manufacture all its cellular phones on a just-in-time basis. That meant they needed a way to print a portfolio of 50 different Motorola cellular phone manuals, with the capability to constantly make revisions due to new product innovations.

To the people at Rich Graphics, with a significant commercial printing business, this news was an opportunity to grow their company by using new technologies to meet Motorola's ambitious quality demands. Helping them meet those demands was the job Xerox took on.

It meant integrating personal computers and printers. It meant cutting out cutting and pasting so people could compose and edit on Xerox workstations. It meant creating text and scanning graphics by using workstation editing

technology to create flawless laser-printed manuals to go with each cellular phone on a just-in-time basis.

It meant working together to change work processes so that all this was done faster, for less money and with virtually no defects. The productivity gains from all this innovative work are in our headline.

What we didn't tell you is that by helping Motorola and other customers find more productive ways to put together their documents Rich Graphics has put together a printing business that has more than doubled in size, not to mention reputation.

Which is the kind of results you get when you start out asking the right questions. To learn more call your local Rank Xerox office.

M&G up 10% to £39m but unit trust sales disappoint

M&G has succeeded in cutting its marketing and commissions expenditure by nearly 10 per cent, partly through reduced sales of unit trust and mutual fund products and reduced commission and marketing expenditure. The company also cut its overtime payments for employees and cut depreciation.

Mr Paddy Llanerch, managing director, said that M&G was seeking to build up institutional custody assets in their managing pension fund monies. Institutional business was

now the fastest growing part of M&G's business, with funds under management rising from £1.6 billion in 1987 to £2.2 billion in 1990.

However, the unit trust business remains "rough going". "We had thought this year would be a good one for unit trusts, but it hasn't happened yet. There will be one eventually," he said. However, following the stock market crash of 1987, M&G has raised its market share of unit trust business.

The final dividend is 10.75p (increased from 10.50p in 1989) to 19p (1991). Earnings per share were 34.1p (32.00p).

Investment income was also slashed to \$682,000 from a previously substantial \$1.9m. Due to lower interest rates and cash balances, but there were no exceptional items in the first half of this year compared with a \$1.5m exceptional charge before.

Trading conditions had been "extremely depressed" and, as a result, the interim dividend is passed (3p).

The high level of demand from small investors means they will probably be allocated two thirds of the offer with one third going to institutions.

Profitability, rather than chasing market share, was now a priority with the three biggest companies, which between them command 70 per cent of the market.

An **analysis** of the breakdown is Thomson 85 per cent, Owners 19 per cent, Airtrons 11 per cent.

Apart from the need to show a decent return to shareholders, Mr Klein said that **low** profits had made it more difficult to provide a quality product and **against** the saw prices rising.

The franchisees' complaints stem from the way in which franchisees were managed - especially the hairdressing operations. In the salons, invoices, wages, rent, and taxes were paid from a joint account with the franchisees, an accountant commissioned by head office and to manage the finances, and the franchisor.

Mr. Schofield said a new team had been appointed to manage HFD. He now intends to leave the business in parts and was confident that HFD would obtain roughly the same amount - \$23.5m - which had been the latest purchase figure agreed with Headlam. Last year HFD incurred an operating loss of \$11m on sales of \$1.5m.

"Discussions to date have resulted in agreement in principle being reached with the company's bankers, subject to contract, which will only be concluded in conjunction with the company raising additional equity capital."

Allied Colloids'
\$20.80 purchase

Colloids is paying \$18.5m in cash and assuming borrowings of about \$2.3m. Mr David Farrar, president of Colloid's North American activities, said the purchase would significantly expand the com-

UK COMPANY NEWS

Dobson Park restructuring begins

By Andrew Bolger

DOBSON PARK Industries, the mining equipment, industrial electronics and toys group, yesterday announced a sweeping restructuring to cope with falling demand from its principal customer, British Coal.

The group said it had increasingly clear that when current supply contracts with electricity terminate in 1993, a significant part of British Coal's traditional market would be threatened by international competitors.

Dobson Park would have to withdraw from its traditional high-volume market supplying hydraulic roof supports and conveyor systems, and instead focus on the limited number of high-technology products which would survive.

The group took an extraordinary charge of \$4.6m to cover the restructuring. Profits fell by 11 per

cent to £13.1m on turnover down 7 per cent. Although earnings fell by 38 per cent to 7.05p (11.32p), the interim dividend is held at 3.85p, maintaining the final at 5.75p.

Mr Alan Kaye, chairman and chief executive, said: "Trading conditions throughout the year were harsh and as yet there is no tangible sign of recovery. Against this background, we have continued to cut costs aggressively in all divisions. The total number of employees fell from 4,400 to 4,043.

The group also took an exceptional charge for reorganisation of £2.5m (£2.8m) with some £1m spent in the mining division in the first half, before the extraordinary provision. The rest of the rest of the extraordinary charge related to reorganisation of the toy division.

The group blamed reduced trading profits from its industrial electronics division - down from £8.1m to £5.4m - on weakness in the US industrial market and some loss of efficiency caused by reorganisation.

Mining equipment, which saw trading profits fall from £7.26m to £6.64m, benefited from increased overseas business, but was unable to offset fully the decline in demand from British Coal.

The slump in the UK construction industry caused turnover to fall from £28.5m to £22.4m, but the impact on trading profits of £1m (£1.54m) was contained by continuing rationalisation of operating facilities.

The toys division, which was also severely affected by low UK demand, made a trading profit of £1.2m (£2.24m).

COMMENT

Dobson Park is rightly viewed as an income stock, so the board did not hesitate to maintain the dividend, in spite of the sharp drop in cover this year. That does not seem unreasonable, given the management's tight grip on costs and the strong balance sheet, where gearing fell from 21 per cent to 14 per cent. The strengthened management is looking at acquisitions in industrial electronics, and seems unlikely to stay in either toys or power tools. Assuming the dividend is held again next year, the shares are on a hefty yield premium to the market, which makes them a safe recovery play. However, the fact that they have outperformed the market by 30 per cent since the beginning of August suggests there may be scope for advance in the short term.

Exceptional costs leave Faber Prest down 35%

By Peggy Hollinger

INDUSTRIALISATION OF the depressed profits at Faber Prest, the industrial and distribution services company, by 38 per cent to £3.1m for the year to September 30.

The pre-tax figure was struck after exceptional charges of £1.7m, arising from redundancy payments, the costs of a research joint venture in the US, and losses on the sale of a truck service business.

Sales declined by 10 per cent to £76.7m. Three businesses were sold during the year and two other year-end losses were incurred on all the disposals and the costs were reflected in the extraordinary charge of £3.6m. One more sale is planned this year.

Mr Roger Fearvour, who became chief executive at the beginning of September, said the group had been reduced. He added that in continuing businesses pre-tax profits had risen by 3 per cent.

Operating profits at industrial services - which accounted for about 70 per cent of the total - fell 7 per cent to £2.4m, on sales up 13 per cent. The slowdown in the steel industry had forced margins down by between 1 and 2 percentage points, Mr Fearvour said.

The distribution operations - responsible for a further 25 per cent - had a difficult year, with profits down 4 per cent and turnover 9 per cent lower. Car retailing suffered a 12 per cent decline.

Debt had been cut by £4.5m to £9.5m at the end of the year, for gearing of 53 per cent. Mr Fearvour said current trading was in line with expectations. However, there had been no significant return in the group's market.

Higher tax charges helped to depress earnings per share, which dropped from 44.55p to 12.55p. Directors are recommending a cut in the final dividend from 7.7p to 4.3p, making a total of 8.6p (12p).

Brick venture cemented to shore up sector subsidence

Andrew Taylor on the Tarmac/Steeltek tie-up

THE rationalisation of the UK's bruised and battered brick industry got under way yesterday with the announcement that Steeltek and Tarmac, two of Europe's largest building materials groups, were to merge their UK clay and concrete products businesses.

The joint venture will mean more plant closures and redundancies in a UK brick industry which has been hit as badly as any sector by the deep recession in the British residential and commercial property markets.

Stocks of unbricks on factory forecourts this autumn rose to almost 1.4m - more than during the recession in the early 1980s and during the property crash in the mid-1970s. Average brick prices have fallen 15 per cent since last November.

UK housebuilders were being criticised for having insufficient capacity to supply housebuilders, which were importing bricks from continental Europe.

UK housebuilders started work on 216,000 private homes, the highest figure for more than a decade. A year later starts had tumbled by 22 per cent to 168,000. This year starts are expected to fall to about 135,000 - a fall of 37 per cent since 1988.

The impact on brick sales has been dramatic. More than 4.5m bricks were sold during 1988; almost 4m were sold in 1989. This year sales are likely to be about 3.1m compared with a manufacturing capacity of 4.5m.

The arithmetic is simple: bigger and deeper cuts will have to be made in capacity. Mr Richard Miles, managing director of Steeltek, says: "Rationalisation is long overdue. Our move will force other people to look at their structural problems."

"Even when the housing market picks up we do not expect annual demand to reach 4m for several years to come."

Marley, another large UK building materials group, has indicated it would be prepared to sell its British brick business. Before completing its deal with Steeltek, Tarmac was understood to have cast a preliminary glance at British Cement, one of the remaining independently quoted brick manufacturers.

GB brick market

Billion bricks per annum

Through its London Brick and Butterley subsidiaries, Hanson is the UK's biggest brick manufacturer. It has cut capacity at the two companies by about a third since the summer of 1988. Other manufacturers have been slower to cut. Prices and margins, as a result, have slumped, making the need for rationalisation even more urgent.

Allied Building Materials, the joint venture to be created by Steeltek and Tarmac, plans to achieve annual savings of about £10m - the brick business is expected to generate more than half of these savings.

The two companies have a combined capacity to produce 70m bricks a year. Together they will be the biggest manufacturer of quality facing bricks with about 18 per cent of the market and the second largest brick producer overall with a 16.5 per cent share.

Mr Bryan Baker, Tarmac's group managing director and chairman of the joint venture, says that brick capacity is likely to be cut by about 100m; this will involve the closure of between three and six plants. Most vulnerable will be brick works in north-east England and in the Midlands where there is the greatest overlap between the companies' plants.

The aim, says Mr Baker, is to cut overheads by 10 to 15 per cent, concentrate brick production in the most efficient plants and become the lowest cost producer in the country.

Steeltek will provide the biggest element of the merged brick business. It has annual capacity of 450m compared with Tarmac's 250m. More

than half of Allied's profits are expected to be generated by brick sales.

Steeltek has two plants in south-east England, the country's biggest construction market, where Tarmac has long desired to expand its brick operations. Tarmac is stronger in south-west England (where Steeltek has only a limited base) and in the Midlands.

Other businesses being merged include the two companies' clay tile operations, which will have a combined market share of 44 per cent, and concrete products which together will command about 16 per cent of that market. In both fields Allied will become the largest supplier.

There will be scope for some savings in these divisions, which, like the brick side, sell heavily into the domestic housing market. Steeltek is much stronger in clay tiles but has only six concrete product plants compared with Tarmac's 24.

Mr Miles of Steeltek says that the effect of the joint venture will be to enhance the earnings of both companies after redundancy and closure costs. Savings are more likely to benefit in 1993 than 1992 given the current state of the housing market.

Tarmac yesterday warned that house sales this year were likely to be lower than it had expected.

Falling house prices since the beginning of this year mean that Tarmac directors would have to reassess what provisions they might have to make to cover potential losses in the future.

There is a lot of pain still to be endured in the construction and building materials sectors.

Dares wins year's grace after bank agreement

By Vanessa Houlder, Property Correspondent

DARES ESTATES, a property company that has been struggling for survival for the last nine months, yesterday announced it has signed an agreement with its banks.

It also published its much delayed interim results, which revealed a pre-tax loss of £16.3m for the six months to June, compared with a pre-tax profit of £1.1m in 1990.

Mr Brian Tomlinson, managing director, said that the agreement, which was eventually signed late on Friday night, was an example of the successful application of the "London Rules", the guidelines laid down by the banks of England to help lenders release from their guarantee obligations. The company was in negotiations with its joint venture banks for handing over the building in return for release from its guarantee obligations.

Other provisions were made against listed securities and costs of closing the London office, as well as refinancing. Turnover rose from £5.5m to £11.6m. Interest costs were up from £4.3m to £7.8m. Losses per share were 6.75p (earnings of 1.02p). The interim dividend is passed (0.25p).

with its rental income at that time. It intended to realise between £20m and £25m of property over the next 30 months.

Mr Tomlinson said that after the initial workout period, the company would need a capital injection of £10m.

Dares had borrowings of £80m and said that its net worth was £10m. It had exceptional provisions of £8.5m. The principal item was £6.7m against the development at Union Square, New York. The company was in negotiations with its joint venture banks for handing over the building in return for release from its guarantee obligations.

Other provisions were made against listed securities and costs of closing the London office, as well as refinancing. Turnover rose from £5.5m to £11.6m. Interest costs were up from £4.3m to £7.8m. Losses per share were 6.75p (earnings of 1.02p). The interim dividend is passed (0.25p).

Control Techniques falls and gloomy on growth

By Michio Nakamoto

CONTROL TECHNIQUES, the international control and process systems group, reported a 44 per cent fall in pre-tax profits to £1.1m for the year ended September 30.

The group was expecting very low growth in the year. The share fell 15p to 197p yesterday.

Profits dropped to £1.1m (7.45p) on turnover of £17.4m (£18.7m). The group had a 44 per cent fall in pre-tax profits to £1.1m from £2.0m in 1990. The group was expecting very low growth in the year.

Mr Trevor Wheatley, chairman, forecast zero growth for the group overall this year and saw no particular reason for expansion in the UK market.

However, Wheatley said that the group was likely to see a 10 per cent increase in profits from the integration of acquisitions, he said.

Earnings per share slumped to 7.7p (19p). However, the final dividend is again 4.35p giving an unchanged total of 6.5p.

The group was counting on contributions from acquisitions for future growth and has been targeting the German and US markets. In Germany it bought Reta Electronic, which is involved in the manufacture of standard electronic drives, and in the US, it acquired Electronic Control Systems, which already markets its process control products there, and ICD, a manufacturer and distributor of electronic control systems.

However, Wheatley said that the group was likely to see a 10 per cent increase in profits from the integration of acquisitions, he said.

Mr Wheatley said that the group was likely to see a 10 per cent increase in profits from the integration of acquisitions, he said.

Antares buys Harrison Inds through £14m reverse takeover

By Michio Nakamoto

HARRISON INDUSTRIES, a supplier of doors, control equipment and castings, is being acquired in a reverse takeover by Antares, a distributor of Du Pont petroleum additives which also owns the Covent Garden General Store, in a recommended offer which values the larger company at £14m.

The takeover of Harrison, which has a market capitalisation of £10m, by Antares, which is capitalised at £11.5m, is being financed through an offer of 800,000 new shares of 10p each for every 100 Harrison shares.

The share offer values each Harrison share at 115p, compared with a middle market quotation of 110p on November 12, when the shares were suspended from the market.

Mr Barry Giddings, chairman and chief executive of Antares, said that the offer could lead to a possible offer.

Yesterday, Harrison's share price surged to 110p on the news, before closing up 40p at 99p.

There is a partial cash and loan note alternative which values each Harrison share at approximately 99p.

In order to finance the cash element of the offer and provide working capital for the enlarged group, Antares is raising about £5.6m net, by way of a placing and open offer of 51m new Antares shares of 10p each at 12p per share. The shares closed yesterday at 114p.

The offer to shareholders will be of three new Antares shares of 10p each for every 10 Antares shares of 1p each at the placing price. A ten-for-one consolidation of the shares is to be proposed at an EGM.

The enlarged group will trade as Harrison Industries. Mr Barry Giddings, chairman and chief executive of Antares, said that the offer could lead to a possible offer.

Antares, said that the Covent Garden General Store would eventually be sold and the enlarged group would be a totally industrial company.

Barry Giddings, chairman of the construction industry would be reduced and new markets sought in the environmental, security and general engineering markets.

In the six months to September 30, Harrison announced a sharp fall in interim pre-tax profits from £22.0m to £27.0m. Consolidated net assets were £18.7m at March 31.

Antares yesterday reported a reduced interim loss before tax of £626,000, against a deficit last time of £744,000 and a £1.1m loss in the year to December 30. Net assets at the year end were £105,000 (£24m in 1990). A rationalisation and reorganisation programme to cut debt has been implemented.

Allied-Lyons to lease 142 pubs to Burtonwood

By Philip Ravensborne

ALLIED-LYONS, which two weeks ago announced plans to lease 142 of its pubs to Burtonwood Brewery, the leisure group, has agreed to lease a further 142 to Burtonwood.

The deal means that Allied will lease a total of 284 of only another 600 pubs to meet government requirements to free 2,300 from tied beer supplies by November next year.

The pubs, located mainly in the West Midlands, South Yorkshire and North Wales, will be leased for a 35-year term. Allied has renegotiated the

non-exclusive supply agreement under which it already supplies Castlemead, and Lowenbrun, as well as some other beers to Burtonwood.

Mr Don Marshall, commercial director of Allied Breweries, said yesterday that the agreement would provide Allied with further improvements in brewing efficiencies and low cost production.

Burtonwood's own ales would be brewed more widely available by the extension of its pub estate and consumer choice would be improved.

HMC mortgage book tops £2bn

Household Mortgage Corporation has bought the mortgage book of Boston Safe Deposit and Trust Co Limited, bringing its own book of mortgages under management to more than £2bn.

No price was disclosed for the deal, HMC said it was still in the market for other quality mortgage books.

Boston Safe Deposit's book contained more than £100m of mortgages. The purchase is the fourth of its kind by HMC in the past year.

The company has also bought the books of Chase Manhattan, Westpac, and Allied Dunbar.

NEWS DIGEST

Surge to over £1m at Vistec

VISTEC, the computer software group, saw pre-tax profits surge from £76,000 to £1.01m, and a returning 10p interim dividend after a year absence with 0.1p.

The profit was generated from turnover of £14.3m (£13.5m). Mr Bob Morton, chairman, said a tight control was kept on costs and a positive cash flow maintained.

Current trading was difficult and expected to remain so until economic conditions improved, he added.

Earnings per share were 0.59p (0.04p).

Vistec recently acquired the assets and undertaking of Ceomore, a specialist in communication software. After paying for that, the group had cash of £5m and medium-term debt of £3m.

Solid progress at United Drug

United Drug, the USM-quoted Irish pharmaceuticals, consumer products and medical equipment group, lifted pre-tax profit from £2.38m to £2.69m (£2.51m) in the year to September 30.

It was another year of solid progress in the transformation of the group into a diversified distribution and marketing combine, said Mr Jerry Liston, chief executive. Net margins improved to 11.1 per cent (10.8 per cent) on sales of £163m (£157.3m).

Cambridge Water rises to £1.38m

Cambridge Water Company reported pre-tax profits of £1.38m for the six months to September 30. The company has changed its accounting period to end on March 31 and consequently the nearest comparable period to the current half is the six months to June 30 1990 when pre-tax profits were £223,000.

The group was struck on turnover up at £5.34m (£5.08m). There was a charge of £414,000 below the line, relating to the cost of the unsuccessful High Court action to recover expenses incurred in 1984 and 1985 to replace a polluted source. An appeal has been lodged.

Earnings grew to 36p (29p) per share and the interim dividend is 4.5p.

AmBrit chief hits out at Pittencreeff

AmBrit International yesterday advised shareholders to ignore Pittencreeff's 54.5m offer as it was "absurdly low".

Mr Alan Russell, chairman, said in AmBrit's defence document that its asset value was more than 14p per share, which was more than 2.5 times the bid price of 54.5p.

He said the offer implied a value for AmBrit's proved and probable oil and gas reserves of only 48p per barrel.

It had recently filed a claim in the US, after consultations over several months with its legal advisers. The group was seeking substantial damages for breach of contract and of fiduciary duties from the operator of some of its US properties and the operator's agents.

Daniel Thwaites brews up 33% gain

A 33 per cent expansion in taxable profits was reported by Daniel Thwaites, the Blackburn-based brewer, for the six months to September 30.

The increase - from £1.2m to £1.58m - was achieved on turnover ahead to £39.6m (£38.3m) and struck despite interest charges up from £1.2m to £1.7m.

The interim dividend is maintained at 0.4p, payable from March 31 to the £1.1p per share.

Loss at Campbell & Armstrong

After exceptional charges, Campbell & Armstrong moved from a profit of £244,000 in the half-year ended September 30. That follows a deficit of £244,000, including exceptional charges, incurred in the second half of last year.

The principal item in the exceptional losses was legal costs of £250,000 arising from the unsuccessful defence of a claim by a sub-contractor against William Lewis & Co (South). The balance represented redundancy and reorganisation costs.

Tex improves to £57,000

Although Tex Holdings lifted pre-tax profits from £17,000 to £57,000 in the six months to September 30, profits from continuing activities fell sharply from last year's £252,000.

Turnover was £2.2m, down from £9.57m from continuing activities and from £11.3m overall.

In the year to March 31 1991 this plastic mouldings, engineering, wood board and system building group, incurred pre-tax losses of £522,000 on turnover of £20m.

Earnings rose by 0.1p to 0.4p per share.

Deficit deepens at Flagstone

Continuing difficulties of the UK property market were blamed by Flagstone Holdings for a further deepening losses in the six months

Acal suffers from fall in margins

Acal, an agent for international makers of electronic and industrial controls, held its sales reduction to 5 per cent in the half year to September 30.

But a drop of one percentage point in gross margins led to a 28 per cent fall in profit to £1.52m (£1.61m) pre-tax. Sales, 70 per cent of which were overseas, came to £25.1m (£26.7m).

Mr John Curry, chairman, said the UK electronics business suffered the most serious downturn, but there was also a sharp decline in sales in southern Europe.

Order levels had improved since June when

Levercrest back in black with £1,000

Thanks in part to interest payable reduced from £67,000 to £51,000, Levercrest returned to the black in the six months to September 30 - albeit only to the tune of £1,000 pre-tax.

Previously, this USM-quoted maker of playground and safety equipment reported losses of £23,000 pre-tax struck on turnover of £3.08m. This time that figure was down at £2.45m, while in the year to September 30 the deficit had been £247,000 on turnover of £5.52m.

In the period under review, operating profits totalled £52,000 (£44,000) and earnings were 0.02p (losses 0.22p) per share.

TURNOVER in Ultramar expanded rapidly during a hectic trading session which saw the oil group's share price move up strongly to close 9p higher at 320p, after touching 322p, amid suggestions of an increased offer from Lasso or a counter-bid from another bidder. Turnover rose to a keen 4.6m shares.

The **Wall Street Journal** for Ultramar
said it was expected to peak this week.
Lasco until Friday to improve
straight one-for-one stock swap.
Since the bid was **rejected**, Lasco then
under increasing pressure, sliding from the **100**
level at last Friday's close. Yesterday
they edged up in the **100** range.
was the "knockout" offer of **375p** was im-
minent. British **£** and a num-
ber of overseas energy projects
were mentioned as potential
bids.

Also widely hinted was that
Lasco was preparing to include
as part of an increased
one specialist spoke of a six-for-five share
up pins **40p** and which
was **40p** at around **380p** to **340p** a share.
"The game is still wide open,"
said an oil analyst.

quently helped by news that Italy had granted a product licence for Glaxo's anti-migraine treatment Imigran. The approval is for both oral and injectable formulations, a Glaxo ~~official~~ said.

The ~~news~~ did little to ~~raise~~ UK buyers, but when Wall Street opened US investors ~~drove~~ the stock around and it ~~ended~~ a net 17 stronger at 779p, with volume reaching 4.3m shares. It was also a good performer against a dull market in New York, where it is dealt in the form of American Depositary Receipts.

ICI downgrade

A reduced profits forecast and change in the shares of ICI by securities house Smith Barney Court brought the stock down 17 1/2 points, or 1.93 percent, to 100 1/2 off its bid.

Smith cut its 1991 estimate by 250m to 2850m and its 1992 figure by 300m to 2,150m. It also moved its recommendation on the shares from hold to sell.

Analyst Mr Charles Lambert said he had downgraded because he expects the poor trading background to offset recent cost-cutting exercises. He said that 1991 profits would be affected by a sharp squeeze on profit margins in the group's petrochemicals and plastics markets.

However, the shares are still seen as a money pull. On Friday, UBS Phillips & Drew, long-term bear on the stock, turned buyer and upgraded its

step of the industry restructuring itself."

Maxwell Communication Corporation and Mirror Group Newspapers were suspended at 125p and 125p respectively "at the request of the company pending clarification of the financial position of the Maxwell family companies and its holding company."

Building shares were given another rough ride in a market suffering from the after-effects of last week's news that J.J. Lovell will have to raise £100 million worth of provisions and will probably breach its bank-

Lowell plummeted further yesterday, ending a low at 24p. Twenty-five last spring, yesterday's shares were changing hands at 200p of 200p.

Warren's dividend cuts or reductions and was worse, and was going back, triggered flurry and falling pressure across the board.

Taylor Woodrow, which has a near 5 per cent stake in Lowell, announced last summer, fell in the trading closing only at 44p dropped at 44p to rallying to end a difficult at 41p at 50p; this year Costain shares was traded at 221p. Wimpey, after widespread reports that it was in its property portfolio, slid to 210p settling 5 down at 130p. Other casualties included John Mowlem, 11 at 139p, and Barratt Developments, 5 cheaper at 139p.

Bedford lost 16 to 456p and Heston Johnson 3 to 70p, with

sharply in early trading. UBS Phillips & Drew **▲** profits estimate on the company and the shares closed 17 down at 624p.

UBS is also cautious on the longer **▲** growth **▲** the health and household products group. It argues that it will be between 10 and 12 per cent, rather than 15 per cent, over the next 5 years and the price/earnings ratio of 14 times is now over-rated.

A **▲** continued in British Aerospace and the shares gained a further 9 to 330p. Turnover reached 1.5m. Bar-

gain hunters helped Lucas Industries regain a 11p share on Friday's fall which followed a downward trend since Rose Govetta.

LSE week's developments at Y.J. Lovell continued to unsettle building related stocks. Trafalgar House slipped 7 to 333p in the face of today's results.

FTSE weakened 18 to 421p.

Harrison Industries jumped 3p to 244p after announcing a £14m recommended offer for the company from Antares Capital. Anthony Harrison at 115p a share.

Turnover at **Carfax** soared to 41m as the shares eased to 33p. The company's **brokers** are fully placed 15m shares.

Good news from pharmaceutical groups SmithKline Beecham and Glaxo benefited the stocks and enabled them to close at record prices. In the FT-SE 100, Index rose 24 points in spite of early weakness.

SmithKline launched its new drug Kyril in the UK and said it would be given 100 mg doses.

Kyril is used to treat nausea in cancer patients undergoing chemotherapy and is available in South Africa and France.

About 50 analysts attended the launch meeting yesterday morning and most were positive. Dr Didier Cowling of Nomura Research said: "To be a success in the pharmaceuticals business you have to be either best or first. Kyril is best and Glaxo's Zofran is first." SmithKline moved ahead 12 to 76pp.

The perceived threat of the new drug knocked best Glaxo share down 10 points when the new drug was launched by a line of 1m shares traded at 75pp. However, the stock was subse-

D-Mark up on rate speculation

THE D-Mark flexed its muscles again yesterday as speculation mounted that the Bundesbank may raise German interest rates at its council meeting on Thursday.

Frankfurt money market rates, which had begun to rise higher on Friday, were given a further boost after Bundesbank president Mr. Helmut Schlesinger said inflationary pressure would keep an upward pressure on interest rates.

Within the ERM, the D-Mark and its close monetary neighbours - the Belgian franc and Dutch guilder - strengthened against the weaker currencies. The D-Mark's lead over sterling - the pound - in the system - the pound - slipped from 2.64 per cent. The German currency also posted gains against the dollar and yen.

Against the dollar, the D-Mark advanced towards the levels at which central banks were recently forced to defend their currencies. It rose in the London market from 1.7750 to 1.7800, and to 1.7850 in New York.

According to Mr. Larry Anderson, executive director of the Bank of America, the D-Mark advanced towards the levels at which central banks were recently forced to defend their currencies. It rose in the London market from 1.7750 to 1.7800, and to 1.7850 in New York.

Dow posts sharp gain after early slide is reversed

Wall Street

US STOCKS staged a dramatic turnaround yesterday, posting strong afternoon gains after coming under considerable pressure in the morning from overnight selling in Tokyo and evidence of economic weakness from the US purchasing managers report, writes Karen Zager in New York.

The Dow Jones Industrial Average dropped more than 30 points in the first 15 minutes of trading. By 1.30pm it was only a net 2.24 off at 2,892.44 and went on to finish the day 40.70 ahead at 2,933.28. New York SE volume, however, was moderate at 1.68m shares.

Although programme buying accounted for some of the afternoon stock gains, there was no single underlying reason for the recovery. "It is unusual to see this type of movement without some significant, tangible event," commented Mr. Lasso Birinyi of Birinyi Associates.

US stocks took some strength from the late recovery in London, and gains in the US bond market also gave support to equities.

IBM helped to pace the stock market's morning decline, sinking to a 52-week low of \$90.40 before recovering to finish the day off \$4 at \$94.42. The stock lost nearly \$5 late last week after several analysts reduced their ratings and earnings projections for the computer group. IBM came under further pressure yesterday after a story in the Wall Street Journal criticised the company's personal computer business and its OS/2 operating system software.

Unleashed, on the other hand, climbed \$1 to \$5 1/2 in very heavy trading on reports that the company might be a takeover target.

Digital Equipment declined \$1 1/2 to \$61 1/2 after Merrill Lynch lowered its second-quarter earnings estimates from 50 cents a share to between 20 to 30 cents a share.

News that Glaxo had been granted a product licence for its anti-migraine drug Imigran

in Italy helped to lift the stock \$1 1/2 to \$29.

Among the more sensitive cyclical stocks, International Paper moved ahead \$2 1/4 to \$66 and Caterpillar recouped recent losses by adding \$2 1/2 to \$49 1/2.

Among active blue chips, AT&T held steady at \$36 1/2. General Electric rose \$1 to \$55 1/2 and Philip Morris put on \$1 1/2 to \$69 1/2. McDonald Douglas lost \$ 1/2 to \$59 1/2. The aircraft and aerospace company expects to make a fourth quarter pre-tax gain of more than \$50m following a settlement with the Internal Revenue Service.

In the secondary market, the Nasdaq composite climbed 7.01 to \$30.91 in late trading. Microsoft helped to pace the afternoon advance, rising \$4 to \$102 1/2, while Amgen climbed \$3 1/2 to \$59 1/2. Intel added \$ 1/2 to \$41 1/2 and Apple Computer gained \$1 to \$51 1/2.

Teradata jumped \$5 1/2 to \$23 1/2, on news that it had accepted a takeover bid from AT&T of \$30 1/2 a share.

Canada

TORONTO stocks rebounded from a sharp opening drop to end mixed overall, with moderate gains in blue chips, although trading was sluggish. Short covering and bargain hunting helped to lift the market.

The composite index ended 7.9 higher at 3,458.4, but declining issues still led advance at the close by 300 to 340. Volume came to 13.5m shares. Nova Corp said it has decided not to split into two separate publicly traded companies at the present time. The shares were unchanged at C\$7 1/2.

SOUTH AFRICA

JOHANNESBURG was mixed. Gold shares found support from bullion prices but industrial shares fell as some went ex-dividend. The industrial index fell 45 to 4,175 but the all-gold index added 23 to 1,256. The overall index lost 24 to 3,518.

EUROPE

Pirelli shares plummet as Continental takeover fails

BOURSES staggered and in some cases subsided yesterday, after the fall in Tokyo, a German interest rate warning from Mr. Helmut Schlesinger, the Bundesbank president, and the collapse of the Pirelli/Continental negotiations, writes Our Markets Staff.

MILAN started the week bereft of good news. Rumours about Pirelli had started last week, but no one had anticipated the extent of its losses. Dealers said that revelations of Pirelli's indemnity pact with its allies in the Continental takeover had upset US investors. The Comit index fell 8.25 or 1.6 per cent to 510.25 in turnover estimated at near Friday's 1,110bn. After the close, the Consob said the delayed settlement of the November account would go ahead tomorrow.

The market was also worried about Olivetti, which fell 1.55 to 12.865. Its planned restructuring was taken as a sign that the company was in greater difficulty than thought.

FRANKFURT was concerned about Soviet solvency and the chance of a strike in the steel industry, and the DAX index fell 21.13 or 1.3 per cent to 1,545.44, after a drop of 9.11 to

633.71 in the FAZ.

Volume declined to DM4.6bn after Friday's DM5.2bn. Volkswagen, designated a weak hold after a critical analysis of its profits by James Capel, dropped DM2.20 to DM29.

The Comit story reminded traders of the risks of cross-border speculation, and Asko dropped another DM2.20 to DM6.61 on worries about its holding in the troubled Swiss employment agency group, Adia. Asko's fellow retailers, Karstadt and Kaufhof, shed 4.1 and 3.1 per cent respectively.

PAIS dropped 1.5 per cent, although the CAC 40 index closed above the 1,700 level after reaching a day's low of 1,693.28. The index finished 30.92 down at 1,708.78. Turnover was moderate at FF1.9bn, down from FF2.15bn.

Blue chips tumbled. Total, which is now included in the CAC 40, fell FF2.80 to FF1,037. Scaia lost FF2.20 to FF1,037.

The trading company said that it would ask shareholders on Friday to approve its plans to raise up to FF1.5bn in capital. ZURICH dropped in this volume, the Credit Suisse index falling 9.9 or 2.1 per cent to 447.6. Chemicals were weak on profit-taking, Ciba-Geigy falling SF7.70 to SF72.950 and Roche SF7.90 to SF72.950.

Adia bearers fell another SF2.20 to SF70.44 on worries over the level of write-offs the company would have to make in connection with the sale of its Meridian business.

AMSTERDAM was upset by London's weak start. The CBS Tendency index fell to 87.2 before closing 1.0 or 1.2 per

cent down at 87.6.

Fokker was one of the few gainers, rising 60 cents to F126.50 on news, and hopes, of further orders. Ahold, the retailer, shed F1.60 to F178.70 on its disappointing third-quarter results.

OSLO plunged another 5.1 per cent on worries about the banking sector, after Den Norske Bank received a state-backed injection of Nkr5.5bn. The all-share index lost 20.16 to 376.39 in turnover of Nkr361m, up from Nkr330m.

DNB, suspended on Thursday, gained Nkr1.2 to Nkr10. Norsk Hydro, which led last week's retreat, fell another Nkr6 to Nkr124.5.

STOCKHOLM fell sharply, the Affarsvärlden General index down 22.6 or 2.4 per cent to 532.2. The scrapping of the turnover tax boosted turnover to SKr12m from SKr25m.

MADRID's general index fell 3.28 or 1.3 per cent to 243.14 in thin trading. The BRUSSELS Bel20 index lost 9.69 to 1,658.37, and VIENNA's ATX index shed 19.92 or 1.9 per cent to 982.85.

ISTANBUL ignored the general malaise. The 75-share index jumped 366.46 or 8.8 per cent to 4,414.53.

Share prices and indices rebound

PIRELLI shares were suspended minutes after the opening in Milan yesterday as neither the company nor its allies made any attempt to shore up market prices, which were vulnerable after the collapse of the takeover talks with Continental of Germany and news of a deep financial crisis at the Italian tyre group.

Pirelli SpA was officially set at L401 or 22.6 per cent lower at L1,308 with an estimated 2m shares traded, while Pirelli & Co. Continental, the erstwhile target, suffered its worst falls a year ago, and yesterday lost just DM7.60 or 3.7 per cent to DM198.

Pirelli's fortunes varied elsewhere in Europe: its Swiss financial holding company, Ste Internationale Pirelli, dropped SF7.58 or 16 per cent to SF7305 after it announced a planned capital increase to subscribe to the Pirelli SpA rights issue; the Amsterdam-listed Pirelli Tire Holding fell F1.70 to F121.50. Michelin, the French tyre maker, outperformed its local market by falling only FF1.60 or 1.3 per cent to FF2119.50.

ASIA PACIFIC

Nikkei falls below 22,000 for first time since August

Tokyo

NERVOUSNESS over the course of domestic and overseas economies brought a sharp fall in futures prices yesterday, followed by a 3 per cent drop in the Nikkei average, which retreated through 22,000 for the first time since August 26, writes Emiko Terazono in Tokyo.

The Nikkei weakened 696.06 to end at the day's low of 21,992.29 after a volatile session dominated by arbitrage-related trading, having opened at the session's high of 22,645.52.

Turnover remained subdued, reaching only 200m shares, and the low volume exaggerated share price movements.

Losing issues overwhelmed rises by 894 to 90, with 118 stocks finishing unchanged. The Topix index gave up 38.90 to 1,882.40, although in London the ISE/Nikkei 10 index eased a mere 0.10 to 1,266.12.

Concern about the US economy spread after the Dow's decline below 2,900 on Wall Street last week, and the recent spate of profit warnings by Japanese companies increased worries about Japan's economic slowdown.

Investors were also discouraged by reports that Mr. Yasushi Mieno, governor of the Bank of Japan, had ruled out another early cut in the official discount rate in a speech yesterday. Market operations by the central bank, which pushed up money market rates by draining funds from short-term money markets, also had adverse effects.

Mr. Masa Sato, derivatives trader at Dai-ichi Securities, said: "Prospects that the cash market would not recover in the short term depressed futures prices, which in turn triggered unwinding of arbitrage cash positions against December futures."

He added that market participants rushed to buy put, or sell, options at the 22,000 level. Some analysts see shares bottoming out around current prices. "The worst of futures selling is over, and some investors are looking to buy at these levels," said Mr. Philip Dodds, strategist at S.G. Warburg.

Blue chips declined on lower profits and the weak economy. Kawasaki Steel fell Y16 to a year's low of Y333 on active selling by a leading Japanese broker. Reports from the securities house's research arm, forecasting a plunge in pre-tax profits for the fiscal year to March 1992, prompted selling.

Nippon Steel shed Y9 to Y366. High-technology issues lost ground on selling by investment trusts. NEC retreated Y30 to Y1,120 and Sony Y130 to a 1991 low of Y4,230.

Brokers' houses were weaker on expectations of lower profits due to the prolonged sluggishness of the stock market. Nomura Securities lost Y10 to Y1,850 and Nikko Securities Y61 to Y355.

Bank shares fell on worries that banks would not be able to satisfy Bank of International Settlements' capital adequacy ratios if the stock market fell further. Industrial Bank of Japan declined Y150 to Y3,200 and Dai-ichi Kangyo Bank Y70 to Y2,480.

In Osaka, the OSE average retreated 689.09 to 23,679.32, below 24,000 for the first time since August 30. Turnover was down to 12m shares from Friday's 16.7m.

THE LATE dive in Tokyo left the Pacific Basin region in decline, although Pakistan was an outstanding exception. HONG KONG fell sharply. The Hang Seng index lost 55.38 to 4,094.51, its biggest setback in seven sessions. Turnover rose from HK\$850m to HK\$961m. Profit-taking in banks con-

tinued, the finance sector index slipping 2.5 per cent during the session. HSBC, parent of Hongkong & Shanghai Banking, dipped HK\$1 to HK\$93. Jardine Matheson receded 75 cents to HK\$36 and Cheung Kong 30 cents to HK\$15.90.

AUSTRIA was depressed by a wider than expected trade deficit and declining house-building statistics. The All Ordinaries index fell 14.5 to 1,591.2 as turnover slumped from A\$289m to A\$125m.

Builders were mixed on the weak October data. James Hardie was steady at A\$5.02 but a sharp reaction was seen in property company Land Lease, down 24 cents to A\$16.60.

TAIWAN finished lower in uncertain trading before the National Assembly elections. The weighted index declined 23.48 to 4,385.02, after shedding 13.11 on Saturday. Turnover came to T\$17.02bn, against Saturday's half-day T\$12.97bn.

SINGAPORE saw the Straits Times Industrial Index slip 14.15 to 1,439.05 in turnover of S\$82.4m, after S\$44.1m. Malaysian stocks were sold on talk that lending rates in Malaysia were about to rise. KUALA LUMPUR's composite index eased 3.68 to 538.31. Volume rose to M\$1.6m from M\$2.8m.

NEW ZEALAND ended easier in spite of some foreign buying in the afternoon. The NZSE-40 index dipped 8.19 to 1,485.51. Turnover shrank to NZ\$7.5m from NZ\$13.8m.

BANGKOK slipped amid uncertainty over the draft constitution, due for final reading this week. The SET index ended 4.47 lower at 866.60 in thin turnover of Bt2.32bn.

SEOUL ended flat as inactivity dampened an early rebound. The composite index lost 0.67 to 651.44.

KARACHI coupled political stability with good corporate news, and the KSE 30-share index climbed 110 or 3.7 per cent to 3,097.

Miserable week for Japan and Norway

By Jacqueline Moore

JITTERS in Japan pulled global stock markets lower last week, although a steady recovery by Wall Street in Thanksgiving week restricted the losses. Most markets finished the week slightly lower, with only Norway showing a sharp decline.

The FT-Actuaries World Index fell 0.9 per cent on the week in local currency terms. By excluding Japan, however, it declined only 0.6 per cent, while by leaving out the US, energy, metals and chemicals group, which accounts for about a quarter of Oslo's market capitalisation, Mr. David Longmire of James Capel says most of the selling was by domestic investors, on rumours of heavy losses at its management division this year.

He expects the market to drift for the rest of this year, as institutions switch between different classes of shares for tax reasons. He hopes for a technical bounce in the new year, but adds: "Foreigners will take an awful lot of coaxing back to Norway."

for Friday 13, draws nearer.

Nomura adds that the failure of recent new listings have added to the pessimism. Sony Music Entertainment, for instance, which failed to trade on November 22, day of its debut, closed at Y5,210 last Monday - 23 per cent below its offer price. On Thursday, Hitachi Medical, which had been offered at Y6,894 a share, finished its first day with an asking price of Y5,500.

Within Europe, the worst performer was Norway, dragged down by 13.3 per cent drop in Norsk Hydro, the energy, metals and chemicals group, which accounts for about a quarter of Oslo's market capitalisation. Mr. David Longmire of James Capel says most of the selling was by domestic investors, on rumours of heavy losses at its management division this year.

He expects the market to drift for the rest of this year, as institutions switch between different classes of shares for tax reasons. He hopes for a technical bounce in the new year, but adds: "Foreigners will take an awful lot of coaxing back to Norway."

Looking for a New Investment Opportunity?

Now's the time to look at Japan.

Look at its track record.

Over the past 25 years Japanese stockmarkets have produced spectacular returns, vastly outperforming most other markets. The graphs below highlight this trend over the last 10 years.

Look at its strong economy.

Tightly controlled inflation. Sharply falling interest rates. A current account in huge surplus. In short, an excellent environment for the Japanese stockmarkets.

Look at its low base.

From its high point of 38,915 at the end of December 1989, the Nikkei Index stood at 25,222 on 31st October 1991 (Source: Mifurage). Clearly, there is a great deal of scope for upward movement.

Look at its potential.

The Bank of Japan's tightest monetary policy since the war is easing. Extensive capital investment has left companies in prime condition. And the upward potential for equities in the future may be enhanced by the fact that warrants, issued at high prices before the fall, will soon expire worthless.

Now take a look at the new Perpetual Offshore Japanese Growth Fund.

At Perpetual, we aim to help you take advantage of these developments with our new Offshore Japanese Growth Fund.

Look at its targets.

Launched on 30th November 1991, the Fund will invest in a core selection of Japanese companies with the potential for vigorous growth.

Look at its experts.

Perpetual's investment experts have extensive knowledge of the Japanese economy. With almost 30 years' collective experience of Japanese stockmarkets, Perpetual's Far Eastern Department will provide expert investment advice to enable the Fund Manager to make incisive investment decisions.

Look at its Introductory Offer.

During the Fund Launch Period (30th November - 13th December 1991) units will be offered at a fixed price of 1 US Dollar. In addition, investors will receive a 2% bonus offer in the form of additional units.

So ACT NOW! Telephone Sue Dawkins in Jersey for a Prospectus on +44 534 68448. Fax: +44 534 38918, or send the coupon today.

Look no further.

The new Offshore Japanese Growth Fund from Perpetual.

To: Perpetual Unit Trust Management (Jersey) Limited, P.O. Box 459, 29 Seaton Place, St Helier, Jersey, JZ4 6W5, Channel Islands. Telephone: +44 534 68448. Please send me the Perpetual Offshore Japanese Growth Fund Prospectus.
